Assessment and Evaluation for Transformation in Early Childhood Julia Formosinho, Christine Pascal, 2017-09-19

Assessment and Evaluation for Transformation in Early Childhood establishes a new democratic and participatory approach to assessment and evaluation in early childhood By analysing the practice of assessment and evaluation within early childhood pedagogy it provides a clear theoretical and methodological basis for this approach and a set of practical techniques for assessment and evaluation Structured into three parts context and principles approaches and techniques and case studies the authors show how documentation and portfolios can be an ethical mode of conducting assessment and evaluation The third part of the text provides educational snapshots of countries that use a participatory approach to learning and teaching and which include the pedagogical dimension of assessment and evaluation Each of the seven illustrative case studies from three different countries bring to life the theories principles and techniques presented throughout the book Key points explored include The nature and purpose of assessment and evaluation within a participatory pedagogy Participatory methods for assessment and evaluation The search for a holistic approach to evaluation Pedagogic documentation uncovering solidary learning Ethical principles for holistic pedagogic evaluation This book is a crucial read for

anyone working in early childhood education who wishes to learn more about professional practice and policy development and all those interested in the pedagogical dimensions of assessment and evaluation **Assessment and Documentation in Early Childhood Education** Maarit Alasuutari, Ann-Marie Markström, Ann-Christine Vallberg-Roth, 2014-01-21

Documentation in early childhood education is typically seen as a means to enhance the quality of care and education and as a way to take account of the child's view. Assessment and Documentation in Early Childhood Education considers the increasing trend towards systematic child documentation especially in early childhood institutions. The authors present ways in which assessment and evaluation is done sometimes explicitly but more often implicitly in these practices and explore its means, aims, forms and functions. They also examine the rationalities of child documentation from the perspective of professional practice and professionalism and suggest that documentation and assessment practices can weaken and constrain but also empower and strengthen teachers, children and parents. Topics explored include: Different forms of documentation and assessment; Documentation and listening to the children; Dilemmas of assessment and documentation; Participation by children; Involvement of parents. This timely book will be appealing for those studying in the field of early childhood education, teacher education, special education, general education, social work, counselling, psychology, sociology, childhood studies and family studies. **Assessment in Early Childhood Education** Sue Clark Wortham, 2008. A practical guide for assessing young children from infancy through age eight focusing on formal and informal assessment, content strategies and examples. *Early Childhood Assessment* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Board on Children, Youth, and Families, Committee on Developmental Outcomes and Assessments for Young Children, 2008-12-21. The assessment of young children's development and learning has recently taken on new importance. Private and government organizations are developing programs to enhance the school readiness of all young children, especially children from economically disadvantaged homes and communities and children with special needs. Well planned and effective assessment can inform teaching and program improvement and contribute to better outcomes for children. This book affirms that assessments can make crucial contributions to the improvement of children's well being but only if they are well designed, implemented effectively, developed in the context of systematic planning and are interpreted and used appropriately. Otherwise assessment of children and programs can have negative consequences for both. The value of assessments therefore requires fundamental attention to their purpose and the design of the larger systems in which they are used. *Early Childhood Assessment* addresses these issues by identifying the important outcomes for children from birth to age 5 and the quality and purposes of different techniques and instruments for developmental assessments. **Authentic Assessment for Early Childhood Intervention** Stephen J. Bagnato, 2007-06-06. Meeting a crucial need, this book provides clear recommendations for authentic developmental assessment of children from infancy to age 6, including those with developmental delays and disabilities. It

describes principles and strategies for collecting information about children's everyday activities in the home, preschool, and community that serves as a valid basis for intervention planning and progress monitoring. Throughout the book, it emphasizes the importance of enlisting parents as partners with practitioners and teachers in observation and team-based decision making. Special features of this well-organized, accessible volume include recommendations for developmentally appropriate assessment tools and Best Practice Guideposts in each chapter that distill key professional standards and practices.

Early Childhood Education Petr G. Grotewell, Yanus R. Burton, 2008 This book focuses on early childhood education, which spans the human life from birth to age 8. Infants and toddlers experience life more holistically than any other age group. Social, emotional, cognitive, language, and physical lessons are not learned separately by very young children. Adults, who are most helpful to young children, interact in ways that understand that the child is learning from the whole experience, not just that part of the experience to which the adult gives attention. Although early childhood education does not have to occur in the absence of the parent or primary caregiver, this term is sometimes used to denote education by someone other than these. The parent or primary caregiver. Both research in the field and early childhood educators view the parents as an integral part of the early childhood education process. Early childhood education takes many forms depending on the theoretical and educational beliefs of the educator or parent. Other terms that are often used interchangeably with early childhood education are early childhood learning, early care, and early education. Much of the first two years of life are spent in the creation of a child's first sense of self or the building of a first identity. Because this is a crucial part of children's makeup, how they first see themselves, how they think they should function, how they expect others to function in relation to them, early care must ensure that, in addition to carefully selected and trained caregivers, links with family, home culture, and home language are a central part of program policy. If care becomes a substitute for rather than a support of family, children may develop a less than positive sense of who they are and where they come from because of their child care experience.
