Asteroid Rendezvous:

Asteroid Rendezvous Jim Bell, Jacqueline Mitton, 2002-08 An account of NASA's dramatic NEAR mission to the asteroid Eros by scientists involved **The Near Earth Asteroid Rendezvous Mission** Christopher Russell, 1998-02-28 Even before the present Administrator of NASA Daniel Goldin made the phrase better faster cheaper the slogan of at least the Office of Space Science that same office under the Associate Administrator of Lennard Fisk and its Division of Solar System Exploration under the direction of Wes Huntress had begun a series of planetary spacecraft whose developmental cost phase CID in the parlance of the trade was to be held to under 150M In order to get the program underway rapidly they chose two missions without the open solicitation now the hallmark of the program One of these two missions JPL's Mars Pathfinder was to be a technology demonstration mission with little immediate science return that would enable later high priority science missions to Mars Many of the science investigations that were included had significant foreign contributions to keep NASA's cost of the mission within the Discovery budget The second of these missions and the first to be launched was the Near Earth Asteroid Rendezvous mission or NEAR awarded to Johns Hopkins University's Applied Physics Laboratory This mission was quite different than Mars Pathfinder being taken from the list of high priority objectives of the science community and emphasizing the science return and not the technology development of the mission This mission was also to prove to be well under the 150M phase CID cap **Asteroids III** William Frederick Bottke, 2002-01-01 Two hundred years after the first asteroid was discovered asteroids can no longer be considered mere points of light in the sky Spacecraft missions advanced Earth based observation techniques and state of the art numerical models are continually revealing the detailed shapes structures geological properties and orbital characteristics of these smaller denizens of our solar system This volume brings together the latest information obtained by spacecraft combined with astronomical observations and theoretical modeling to present our best current understanding of asteroids and the clues they reveal for the origin and evolution of the solar system This collective knowledge prepared by a team of more than one hundred international authorities on asteroids includes new insights into asteroid meteorite connections possible relationships with comets and the hazards posed by asteroids colliding with Earth The book's contents include reports on surveys based on remote observation and summaries of physical properties results of in situ exploration studies of dynamical collisional cosmochemical and weathering evolutionary processes and discussions of asteroid families and the relationships between asteroids and other solar system bodies Two previous Space Science Series volumes have established standards for research into asteroids Asteroids III carries that tradition forward in a book that will stand as the definitive source on its subject for the next decade Asteroids Curtis Peebles, 2016-04-26 Asteroids suggest images of a catastrophic impact with Earth triggering infernos tidal waves famine and death but these scenarios have obscured the larger story of how asteroids have been discovered and studied During the past two centuries the quest for knowledge about asteroids has involved eminent scientists and amateur astronomers patient

research and sudden intuition advanced technology and the simplest of telescopes newspaper headlines and Cold War secrets Today researchers have named and identified the mineral composition of these objects They range in size from 33 feet to 580 miles wide and most are found in a belt between the orbits of Mars and Jupiter Covering all aspects of asteroid investigation Curtis Peebles shows how ideas about the orbiting boulders have evolved He describes how such phenomena as the Moon's craters and dinosaur extinction were gradually and by some scientists grudgingly accepted as the results of asteroid impacts He tells how a band of icy asteroids rimming the solar system first proposed as a theory in the 1940s was ignored for more than forty years until renewed interest and technological breakthroughs confirmed the existence of the Kuiper Belt Peebles also chronicles the discovery of Shoemaker Levy 9 a comet with twenty two nuclei that crashed into Jupiter in 1994 releasing many times the energy of the world's nuclear arsenal Showing how asteroid research is increasingly collaborative the book provides insights into the evolution of scientific ideas and the ebb and flow of scientific debate

Asteroids IV Patrick Michel, Francesca E. DeMeo, William F. Bottke, 2015-12-31 More than forty chapters detail our current astronomical compositional geological and geophysical knowledge of asteroids as well as their unique physical processes and interrelationships with comets and meteorites Provided by publisher *A Core Program* NASA Advisory Council. Solar System Exploration Committee, 1986 *Asteroids* Edward C. Blair, 2002 With the bulk of asteroids floating in space between the orbits of Mars and Jupiter astronomers puzzle over where these rocks came from Are they the remnants of a planet Excess not used in the formation of the Solar System Nothing more than random bits of debris The location of the belt makes for a quasi barrier separating the inner from the outer planets Perhaps asteroids were meant to discourage human space exploration NASA has sent missions to explore the asteroid belt and the rocks themselves and those missions have yielded some interesting observations on the composition of the asteroids but no definitive answer as to their origin Earth based tools such as telescopes and satellites also contribute to asteroid research but cannot plumb the depths behind these varied chunks of flotsam Presented in this book is a list of carefully chosen abstracts and citations of relevant literature about asteroids and the research into them Prior to this listing though comes an overview of the nature of the asteroids and what we know now about them and what we hope to discover in the future lifeless but mysterious rocks inhabiting the solar system To conclude easy access is provided through author title and subject indexes *Physical Studies of Minor Planets* Tom Gehrels, 1971 Some papers and discussions included in this book even though they were not presented at the meeting In some respects therefore the book is independent of the colloquium Several papers had been invited long beforehand with the request to publish them as review papers The lack of a modern textbook on minor planets is keenly felt and the proceedings of this meeting with these additions should provide a good reference book Page viii *NASA Thesaurus*, 1998 Contains the authorized subject terms by which the documents in the NASA STI Database are indexed and retrieved **SPACE: THE FAILED FRONTIER** R. J. Pearson, 2025-08-20 This book is for readers who wonder why the US turned its back on lunar

exploration failed for half a century to produce a sustainable crewed space flight program and how we might now finally be able to restart human space exploration Since the end of the Apollo program NASA's human space flight program has had little political support and even less funding It needs to be replaced by an economically self sustaining commercial space program The book's narrative examines the technical and economic challenges in establishing a human settlement in Earth Orbit on the lunar surface and on Mars NASA's failed program to reduce orbital launch costs and use space exploration to increase international cooperation is discussed Methods of establishing an economically self supporting lunar mining colony are examined in detail Three proposed programs for human exploration of Mars are compared Asteroids as a source of terror and possible treasure are examined in the final chapters The book is based on Internet research and analysis augmented by original back of the envelope calculations at key points

A Dictionary of the Space Age Paul Dickson, 2009-05-18 2009 Outstanding Academic Title Choice The launch of Sputnik 1 in 1957 ushered in an exciting era of scientific and technological advancement As television news anchors radio hosts and journalists reported the happenings of the American and the Soviet space programs to millions of captivated citizens words that belonged to the worlds of science aviation and science fiction suddenly became part of the colloquial language What's more NASA used a litany of acronyms in much of its official correspondence in an effort to transmit as much information in as little time as possible To translate this peculiar vocabulary Paul Dickson has compiled the curious lingo and mystifying acronyms of NASA in an accessible dictionary of the names words and phrases of the Space Age Aviators fighter pilots and test pilots coined the phrases spam in a can how astronauts felt prelaunch as they sat in a tiny capsule atop a rocket booster tickety boo things are fine and the Eagle has landed Neil Armstrong's famous quote when Apollo 11 landed on the Moon This dictionary captures a broader foundation for language of the Space Age based on the historic principles employed by the Oxford English Dictionary and Webster's New Third International Dictionary Word histories for major terms are detailed in a conversational tone and technical terms are deciphered for the interested student and lay reader This is a must own reference for space history buffs
