

ASTHMA BASIC FACTS

Staying safe and well with asthma

WHAT ARE AIRWAYS?

Airways are found in your lungs. Airways make up a network of tubes used to carry air in and out of the body when you are breathing.

WHAT IS ASTHMA?

Asthma is a long-term lung condition which can be controlled but cannot currently be cured. People with asthma have sensitive airways. These airways are more likely to react to triggers. The lining of the airways is thicker and inflamed. When a person with asthma has an asthma flare-up, the muscles around the airway squeeze tight, the airways swell and become narrow, and there is more mucus. This makes it hard to breathe.

An asthma flare-up can come on slowly (over hours, days or even weeks) or very quickly (over minutes). A sudden or severe asthma flare-up is sometimes called an asthma attack. Any person with asthma can have an asthma flare-up.

The good news is, for most people, asthma can be well-controlled by following a daily management plan. People with well-controlled asthma have irregular asthma symptoms and very few flare-ups. This means that people with asthma can live healthy, active lives.

HOW DO YOU RECOGNISE ASTHMA?

People with asthma can have a range of symptoms:

- Breathlessness
- Wheezing
- Tight chest
- Persistent cough
- Symptoms often occur at night, early in the morning or during/after activity

A person's asthma symptoms can vary over time - sometimes they will have no symptoms, especially when asthma is well-controlled. Symptoms often vary from person to person.

WHO GETS ASTHMA AND WHY?

Asthma affects people of all ages. Some people get asthma when they are young; others when they are older. The causes are not entirely understood, although people with asthma often have a family history of asthma, eczema and hay fever. There is some evidence that exposure to environmental factors such as workplace chemicals or tobacco smoke can lead to asthma.

Researchers continue to try to find out more about what causes asthma and how we might prevent it.
