Kronheimer, Ioan Mackenzie James, Savilian Professor of Geometry N J Hitchin, 2014-05-14 This is a memorial volume to the distinguished Canadian born mathematician Hugh Dowker one of the most highly regarded topologists in the United Kingdom and sometime Professor at Birkbeck College London The volume comprises specially written articles on various topological topics by experts in many countries who worked with Dowker at one time or another These include survey expository and research articles on general topology algebraic topology and related subjects such as knot theory and graph theory The volume will be of great interest to graduate students and professional mathematicians whose speciality is topology in all its aspects *Categorical Aspects of Topology and Analysis* B. Banaschewski, 2006-11-14 **Categorical Aspects of Topology and Analysis** B. Banaschewski, 2014-01-15 **The Collected Papers of R.h. Bing** R. H. Bing, 1988 A powerful mathematician and a great problem solver R H Bing laid the foundation for a number of areas of topology Many of his papers have continued to serve as a source of major theoretical developments and concrete applications in recent years One outstanding example was Michael H Freedman s use of Bing s Shrinking Criterion to solve the four dimensional Poincare Conjecture This two volume set brings together over one hundred of Bing s research expository and miscellaneous papers These works range over a great variety of topics in topology including the topology of manifolds decomposition spaces continua metrization general topology and geometric topology In addition there are a number of papers in the areas of convex functions linearity and conformal varieties The introductory section in the first volume provides historical background on Bing s life and achievements This collection will appeal to mathematicians in all areas and especially those in topology as well as students historians and educators in the mathematical sciences for it provides a complete historical summary of the mathematical events in the life of the man and the mathematician R H Bing **Introduction To Topology** Dr. S. N. Dhar, Topology is a branch of mathematics that studies the properties of spaces that are preserved under continuous deformations such as stretching or bending but not tearing or gluing It focuses on concepts like continuity open and closed sets compactness and connectedness without relying on exact measurements like distance or angles A key idea is the topological space a set with a structure that defines which subsets are open Two spaces are considered topologically equivalent homeomorphic if they can be transformed into each other through continuous functions with continuous inverses Topology has various branches including point set topology algebraic topology and differential topology and it plays a foundational role in fields like geometry analysis and theoretical physics Starts with point set topology basic definitions open closed sets interior closure boundary etc pearsoned co in Moves on to continuous functions and homeomorphisms metric spaces pearsoned co in Key topological properties connectedness compactness pearsoned co in Advanced topics applications knots robotics graphs manifolds embeddings fixed point theorems homotopy

Cognitive and Linguistic Aspects of Geographic Space Martin Raubal, David M Mark, Andrew U. Frank, 2013-01-30 20 years ago from July 8 to 20 1990 60 researchers gathered for two weeks at Castillo Palacio Magalia in Las Navas del Marques Avila Province Spain to discuss cognitive and linguistic aspects of geographic space This meeting was the start of successful research on cognitive issues in geographic information science produced an edited book D M Mark and A U Frank Eds 1991 Cognitive and Linguistic Aspects of Geographic Space NATO ASI Series D Behavioural and Social Sciences 63 Kluwer Dordrecht Boston London and led to a biannual conference COSIT a refereed journal Spatial Cognition and Computation and a substantial and still growing research community It appeared worthwhile to assess the achievements and to reconsider the research challenges twenty years later What has changed in the age of computational ontologies and cyber infrastructures Consider that 1990 the web was only about to emerge and the very first laptops had just appeared The 2010 meeting brought together many of the original participants but was also open to others and invited contributions from all who are researching these topics Early career scientists engineers and humanists working at the intersection of cognitive science and geographic information science were invited to help with the re assessment of research needs and approaches The meeting was very successful and compared the research agenda laid out in the 1990 book with achievements over the past twenty years and then turned to the future What are the challenges today What are worthwhile goals for basic research What can be achieved in the next 20 years What are the lessons learned This edited book will assess the current state of the field through chapters by participants in the 1990 and 2010 meetings and will also document an interdisciplinary research agenda for the future

Gil-Lafuente, 2011-11-13 Little by little we are being provided with an arsenal of operative instruments of a non numerical nature in the shape of models and algorithms capable of providing answers to the aggressions which our economics and management systems must withstand coming from an environment full of turmoil In the work which we are presenting we dare to propose a set of elements from which we hope arise focuses capable of renewing those structures of economic thought which are upheld by the geometrical idea The concepts of pretopology and topology habitually marginalized in economics and management studies have centred our interest in recent times We consider that it is not possible to conceive formal structures capable of representing the Darwinism concept of economic behaviour today without recurring to this fundamental generalisation of metric spaces In our attempts to find a solid base to the structures proposed for the treatment of economic phenomena we have frequently resorted to the theory of clans and the theory of affinities with results which we believe to be satisfactory We would like to go further establishing if possible the connection between their axiomatics at the same time as developing some uncertain pretopologies and topologies capable of linking previously unconnected theories at the sametime easing the creation of other new theories

Molecular Aspects of Biotechnology: Computational Models and Theories Juan Bertrán, 2012-12-06 Although biotechnology emerged from the genetic engineering revolution of the 70s the knowledge of the structure of genes revealed its molecular aspects Molecular biotechnology is a multidisciplinary domain of research in which experiments simulations and theories interact At present the huge increase in computer power allows us to carry out numerical simulations of biochemical systems However a fundamental question appears concerning the sophistication of the model utilized to capture the main features of biomolecules and biochemical processes In the present book a group of leading specialists in molecular biotechnology provides an answer to this question This book is thus an excellent tool for those researchers wishing to know the state of the art in this domain The book spans the range from molecular conformations through protein folding and from

chemical reactivity through enzymatic action Furthermore it formulates recommendations for future research in molecular biotechnology
