Assessing Rational Expectations Sunspot Multiplicity And Economic Fluctuations

Assessing Rational Expectations Sunspot Multiplicity And Economic Fluctuations:

Assessing Rational Expectations R. Guesnerie, 2001 Roger Guesnerie contributes to the critical assessment of the Rational Expectations hypothesis REH *Assessing Rational Expectations 2* Roger Guesnerie, 2005-02-18 A theoretical assessment of the Rational Expectations Hypothesis through subjecting a collection of economic models to an eductive stability test The rational expectations hypothesis REH dominates economic modeling in areas ranging from monetary theory macroeconomics and general equilibrium to finance In this book Roger Guesnerie continues the critical analysis of the REH begun in his *Assessing Rational Expectations Sunspot Multiplicity and Economic Fluctuations* which dealt with the questions raised by multiplicity and its implications for a theory of endogenous fluctuations This second volume emphasizes eductive learning relying on careful reasoning agents must deduce what other agents guess a process that differs from the standard evolutionary learning experience in which agents make decisions about the future based on past experiences A broad eductive stability test is proposed that includes common knowledge and results in a unique rationalizable expectations equilibrium This test provides the basis for Guesnerie's theoretical assessment of the plausibility of the REH's expectational coordination emphasizing for different categories of economic models conditions for the REH's success or failure Guesnerie begins by presenting the concepts and methods of the eductive stability analysis in selected partial equilibrium models He then explores to what extent general equilibrium strategic complementarities interfere with partial equilibrium considerations in the formation of stable expectations Guesnerie next examines two issues relating to eductive stability in financial market models speculation and asymmetric price information The dynamic settings of an infinite horizon model are then taken up and particular standard and generalized saddle path solutions are scrutinized Guesnerie concludes with a review of general questions and some cautious remarks on the policy implications of his analysis *Knowledge, Beliefs and Economics* R. Arena, 2006-01-01 The contributors to this book also suggest the need for a more integrated perspective on the meaning as well as the role of knowledge and beliefs in economics in the future Possible lines of future research such as the extension of the concept of rationality in economics or the focus on cognitive processes in economic action are discussed

Information and Learning in Markets Xavier Vives, 2010-01-25 The ways financial analysts traders and other specialists use information and learn from each other are of fundamental importance to understanding how markets work and prices are set This graduate level textbook analyzes how markets aggregate information and examines the impacts of specific market arrangements or microstructure on the aggregation process and overall performance of financial markets Xavier Vives bridges the gap between the two primary views of markets informational efficiency and herding and uses a coherent game theoretic framework to bring together the latest results from the rational expectations and herding literatures Vives emphasizes the consequences of market interaction and social learning for informational and economic efficiency He looks closely at information aggregation mechanisms progressing from simple to complex environments from static to dynamic

models from competitive to strategic agents and from simple market strategies such as noncontingent orders or quantities to complex ones like price contingent orders or demand schedules Vives finds that contending theories like informational efficiency and herding build on the same principles of Bayesian decision making and that irrational agents are not needed to explain herding behavior booms and crashes As this book shows the microstructure of a market is the crucial factor in the informational efficiency of prices Provides the most complete analysis of the ways markets aggregate information Bridges the gap between the rational expectations and herding literatures Includes exercises with solutions Serves both as a graduate textbook and a resource for researchers including financial analysts Public Investment, Growth and Fiscal Constraints

Massimo Florio, 2011-01-01 This book makes a unique contribution in advancing understanding of the fiscal condition and growth potential of the New Member States of the European Union It provides new data policy evaluation and offers national and regional perspectives The core research questions are the effect of public investment in the context of macroeconomic disequilibrium and how it is possible to finance capital accumulation in the present and future conditions of mounting public sector debt The contributors reveal that there is now a convincing case for public investment as an essential driver of convergence and growth in Europe However a new international and inter generational fiscal pact to frame a more optimistic view of the role of government is needed This book explores how public investment matters for growth how fiscal conditions may support investment and the role EU regional policy can have in terms of structural change and investment needs Public Investment Growth and Fiscal Constraints provides new data analyses on the EU New Member States in Central and Eastern Europe making it an essential tool for academics students and practitioners interested in public finance and European Economics The structural and public finance issues in these former transition economies raised in this book will also strongly appeal to policymakers officials and consultants The book is based on an independent research project of the University of Milan supported by the European Investment Bank Life After Debt J. Stiglitz, D. Heymann, 2014-07-23 This volume

provides a pluralistic discussion from world renowned scholars on the international aspects of the debt crisis and prospects for resolution It provides a comprehensive evaluation of how the debt crisis has impacted Western Europe the emerging markets and Latin America and puts forward different suggestions for recovery Equilibrium, Markets and Dynamics Cars H. Hommes, Roald Ramer, Cees A. Withagen, 2002-05-14 This book contains essays in honour of Claus Weddepohl who after 22 years is retiring as professor of mathematical economics at the Department of Quantitative Economics of the University of Amsterdam Claus Weddepohl may be viewed as the first Dutch mathematical economist in the general equilibrium tradition of Arrow Debreu and Hahn The essays in this book are centered around the themes Equilibrium Markets and Dynamics that have been at the heart of Weddepohl's work on mathematical economics for more than three decades The essays have been classified according to these three themes Admittedly such a classification always is somewhat arbitrary and most essays would in fact fit into two or even all three themes The essays have been written by international as well as Dutch friends and

colleagues including Weddepohl's former Ph D students The book starts with a review of Claus Weddepohl's work by Roald Ramer who has been working with him in Amsterdam for all those years The review describes how Weddepohl became fascinated by general equilibrium theory in the early stages of his career how he has been working on the theory of markets throughout his career and how he turned to applications of nonlinear dynamics to price adjustment processes in a later stage of his career The first part of the book *Equilibrium* collects essays with general equilibrium theory as the main theme

Limits Of Mathematical Modeling In The Social Sciences, The: The Significance Of Godel's Incompleteness Phenomenon
Francisco Antonio Doria, 2017-05-30 Current mathematical models are notoriously unreliable in describing the time evolution of unexpected social phenomena from financial crashes to revolution Can such events be forecast Can we compute probabilities about them Can we model them This book investigates and attempts to answer these questions through Godel's two incompleteness theorems and in doing so demonstrates how influential Godel is in modern logical and mathematical thinking Many mathematical models are applied to economics and social theory while Godel's theorems are able to predict their limitations for more accurate analysis and understanding of national and international events This unique discussion is written for graduate level mathematicians applying their research to the social sciences including economics social studies and philosophy and also for formal logicians and philosophers of science **Rethinking Expectations** Roman

Frydman, Edmund S. Phelps, 2013 This book originated from a 2010 conference marking the fortieth anniversary of the publication of the landmark Phelps volume *Microeconomic Foundations of Employment and Inflation Theory* a book that is often credited with pioneering the currently dominant approach to macroeconomic analysis However in their provocative introductory essay Roman Frydman and Edmund Phelps argue that the vast majority of macroeconomic and finance models developed over the last four decades derailed rather than built on the Phelps volume's microfoundations approach Whereas the contributors to the 1970 volume recognized the fundamental importance of according market participants expectations an autonomous role contemporary models rely on the rational expectations hypothesis REH which rules out such a role by design The financial crisis that began in 2007 preceded by a spectacular boom and bust in asset prices that REH models implied could never happen has spurred a quest for fresh approaches to macroeconomic analysis While the alternatives to REH presented in *Rethinking Expectations* differ from the approach taken in the original Phelps volume they are notable for returning to its major theme understanding aggregate outcomes requires according expectations an autonomous role In the introductory essay Frydman and Phelps interpret the various efforts to reconstruct the field some of which promise to chart its direction for decades to come The contributors include Philippe Aghion Sheila Dow George W Evans Roger E A Farmer Roman Frydman Michael D Goldberg Roger Guesnerie Seppo Honkapohja Katarina Juselius Enisse Kharroubi Blake LeBaron Edmund S Phelps John B Taylor Michael Woodford and Gylfi Zoega *Chasing the Sun* Richard Cohen, 2011-08-04 The Sun is so powerful so much bigger than us that it is a terrifying subject Yet though we depend on it we take it for granted

Amazingly the first book of its kind CHASING THE SUN is a cultural and scientific history of our relationship with the star that gives us life Richard Cohen applying the same mix of wide ranging reference and intimate detail that won outstanding reviews for By the Sword travels from the ancient Greek astronomers to modern day solar scientists from Stonehenge to Antarctica site of the solar eclipse of 2003 when penguins were said to sing Mexico's Aztecs to the Norwegian city of Tromsø where for two months of the year there is no Sun at all He introduces us to the crucial sunspot cycle in modern economics the religious dances of Indian tribesmen the histories of sundials and calendars the plight of migrating birds the latest theories of global warming and Galileo recording his discoveries in code for fear of persecution And throughout there is the rich Sun literature from the writings of Homer through Dante and Nietzsche to Keats Shelley and beyond Blindingly impressive and hugely readable this is a tour de force of narrative non fiction

Expectations, Rationality and Economic Performance Tobias F. Rötheli, 2007 This book offers a broad perspective on the economics of expectations Experimental studies are used to analyse how human bounded rationality affects economic performance The challenges posed for policy making are also addressed Tobias Rotheli begins by presenting the basic tools and theoretical models necessary to our understanding of rational and boundedly rational expectations and their role in economic life Key topics discussed include expectations in general equilibrium theory probabilities and expected utility heterogeneity of economic agents behavioural alternatives to forecasting and the effects of expectations heuristics particularly in financial markets The author then goes on to explore the fascinating insights behavioural economics the empirical analysis of economic decision making has to offer Here experimental studies illustrate the effects of costly information the role of pattern recognition as basis of expectations anticipation and coordination failures and the role of expectations in determining the general price level The book also addresses the implications of the experimental findings for applied economics Aiming to achieve the accessibility of a textbook this research monograph will appeal to economic researchers interested in economic behaviour and theory as well as students taking upper level undergraduate and graduate courses It will also be of interest to economists working in business and government

Freefall Joseph E. Stiglitz, 2015-09-24 Out of the crisis of our times Joseph Stiglitz's Freefall Free Markets and the Sinking of the Global Economy is a convincing coherent and humane account that goes to the heart of how we run our societies When the world economy went into freefall so too did our unquestioning faith in markets But what happens now Are bailouts and stern lectures enough or do we need a rethink of our entire financial system This acclaimed and inspiring book by one of the world's leading economic thinkers dissects the flawed ideas that led to the credit crunch but also looks to the future Drawing on his years spent shaping policy at the World Bank Nobel Laureate Joseph Stiglitz shows why far more radical reforms are needed to avoid future crises why the cost of recovery should be borne by the financial sector and how we now have the opportunity to create a new global economic order Bang on the money unafraid to ask tough questions we need more of his ilk Will Hutton Observer A brilliant analysis always enthralling Martin Jacobson Spectator

Business A powerful new book Devin Leonard The New York Times A seer of almost Keynesian proportions this is Joe Stiglitz's victory lap Michael Hirsh Newsweek Joseph Stiglitz was Chief Economist at the World Bank until January 2000 He is currently University Professor of the Columbia Business School and Chair of the Management Board and Director of Graduate Summer Programs Brooks World Poverty Institute University of Manchester He won the Nobel Prize for Economics in 2001 and is the author of the best selling Globalization and Its Discontents Making Globalization Work The Roaring Nineties and The Price of Inequality all published by Penguin
