Learning Large Lessons David E. Johnson, 2007-03-30 The relative roles of U S ground and air power have shifted since the end of the Cold War At the level of major operations and campaigns the Air Force has proved capable of and committed to performing deep strike operations which the Army long had believed the Air Force could not reliably accomplish If air power can largely supplant Army systems in deep operations the implications for both joint doctrine and service capabilities would be significant To assess the shift of these roles the author of this report analyzed post Cold War conflicts in Iraq 1991 Bosnia 1995 Kosovo 1999 Afghanistan 2001 and Iraq 2003 Because joint doctrine frequently reflects a consensus view rather than a truly integrated joint perspective the author recommends that joint doctrine and the processes by which it is derived and promulgated be overhauled The author also recommends reform for the services beyond major operations and campaigns to ensure that the United States attains its strategic objectives This revised edition includes updates and an index

Green Warriors David E. Mosher, 2008 Recent experiences in Iraq Afghanistan and the Balkans have highlighted the importance of environmental considerations These range from protecting soldier health and disposing of hazardous waste to building water supply systems and other activities that help achieve national goals in the post conflict phase of contingency operations The Army has become increasingly involved with environmental issues in every contingency operation and must be better prepared to deal with them This study assesses whether existing policy doctrine and guidance adequately address environmental activities in post conflict military operations and reconstruction Findings are based on reviews of top level policy and doctrine analysis of operational experience extensive interviews with diverse Army personnel and a review of operational documentation and literature From these sources a database of 111 case studies was created The research showed that environmental concerns can have far reaching and significant impacts on the Army both direct and indirect especially in terms of cost current operations soldier health diplomatic relations reconstruction activities and the ultimate success of the operation or the broader mission Some evidence suggests that environmental problems may have even contributed to insurgency in Iraq Recommendations include updating current policy and doctrine to fully address environmental considerations in contingency operations ensuring that contractors are carefully selected and managed and transmitting proactive field environmental practices and lessons throughout the Army

Littoral Combat Ships Brien Alkire, 2007 The Navy's Littoral Combat Ship LCS constitutes a new class of fast agile and networked warships designed to overcome threats in shallow waters posed by mines diesel electric submarines fast attack craft and fast inshore attack craft The LCS Program Office asked RAND to help it gain a clearer understanding of operational logistics and cost trade offs between three interdependent elements of the program the number of LCSs in the fleet the number of mission packages that those LCSs would require in order to perform a range of missions and the number and locations of LCS homeports and mission package installation sites Alkire et al worked closely with the Navy between January and November 2005 to identify

scenarios that define the use and deployment of LCSs Using these scenarios and a range of LCS fleet sizes the authors established baseline considerations connected with developing and deploying a modular LCS They then developed a series of analytical tools to address the following issues Where are the optimum locations for LCS homeports and mission package installation sites How many mission packages of each type should be procured and when How many mission packages of each type should be stored on available seaframes at homeports and at mission package installation sites What are the costs of acquiring mission packages and facilities for homeports and installation sites What cost and performance trade offs and sensitivities occur with various combinations of the number of and the types of mission packages **United States**
