Asteroid Earth Destroyer Or New Frontier:

Asteroid Patricia L. Barnes-Svarney, 2013-11-11 **New Natures** Dolly Jørgensen, Finn Arne Jørgensen, Sara B. Pritchard, 2013-07-08

New Natures broadens the dialogue between the disciplines of science and technology studies STS and environmental history in hopes of deepening and even transforming understandings of human nature interactions The volume presents richly developed historical studies that explicitly engage with key STS theories offering models for how these theories can help crystallize central lessons from empirical histories facilitate comparative analysis and provide a language for complicated historical phenomena Overall the collection exemplifies the fruitfulness of cross disciplinary thinking The chapters follow three central themes ways of knowing or how knowledge is produced and how this mediates our understanding of the environment constructions of environmental expertise showing how expertise is evaluated according to categories categorization hierarchies and the power afforded to expertise and lastly an analysis of networks mobilities and boundaries demonstrating how knowledge is both diffused and constrained and what this means for humans and the environment Contributors explore these themes by discussing a wide array of topics including farming forestry indigenous land management ecological science pollution trade energy and outer space among others The epilogue by the eminent environmental historian Sverker Sorlin views the deep entanglements of humans and nature in contemporary urbanity and argues we should preserve this relationship in the future Additionally the volume looks to extend the valuable conversation between STS and environmental history to wider communities that include policy makers and other stakeholders as many of the issues raised can inform future courses of action

[The Tungus Event, Or the Great Siberian Meteorite](#) John Engledew, 2010 This popular science book shares the fascination of the Tungus Event a major mystery of the 20th century in a factual and informed way It provides on the ground descriptions of the site and explains the findings and the puzzlement of international scientists who have investigated it over the decades After a brief and readable overview of comets meteors the sun and the solar system the author ponders the range of possible explanations for the great Siberian meteorite The research is up to date factual and scientific While making no absurd claims to solving the puzzle the author studies some intriguing clues in NASA s orbit diagrams for Comet Encke and he is bold in discussing the possible causes of what was the greatest natural explosion in recorded history As he points out Hypotheses include rogue asteroids mini black holes and even alien intervention These explanations are not entirely equal to the facts In the unique case of the Tunguska event there was wholesale destruction to the mighty taiga woodlands but none of the debris that one would expect should exist from the body itself Evidence like a strewn field of meteorite debris or meteoric dust on the trees and ground were never found nor were any craters in the area beneath the site of the fireball nor anywhere along the path it took There are no craters because the Tunguska Cosmic Body TCB did not hit the ground Atmospheric anomalies prior to the dramatic appearance of the fiery body puzzlingly occurred for several days adding to the enigma There are just a handful of English language books on this subject

The most recent *The Tunguska Mystery* by the Russian Rubstov Astronomers Universe Springer Science 2009 is authoritative but highly technical and hard going for the general reader Mr Engledew instead tells the story in a balanced and engaging style

Creation and Complexity Christine Ledger, Stephen Pickard, 2004 Creation and Complexity are two themes that draw the sciences and theology together The remarkable advances of science in the modern period have opened up new knowledge and revealed ever deepening layers of complexity in the world from the cosmic macro level to the micro world of quantum There seems no end to the rich tapestry of the cosmic order and process A science of complexity has been spawned The discoveries of the sciences have been matched in the twentieth century by a renewal in the doctrine of creation Behind this lies a renaissance in trinitarian thinking which offers fresh insight into the dynamic of God in creation past present and future The complexity of the triune God in creation find echoes in the rich complexity of the world uncovered by the contemporary sciences This book explores the nature of complexity in God's creation

Hollywood Science Sidney Perkowitz, 2010-02-22 In this book a scientist and dedicated film enthusiast discusses the portrayal of science in more than one hundred films including science fiction scientific biographies and documentaries Beginning with early films like *Voyage to the Moon* and *Metropolis* and concluding with more recent offerings like *The Matrix* *War of the Worlds* *A Beautiful Mind* and *An Inconvenient Truth* Sidney Perkowitz questions how much faith we can put into Hollywood's depiction of scientists and their work how accurately these films capture scientific fact and theory whether cataclysms like our collision with a comet can actually happen and to what extent these films influence public opinion about science and the future Bringing together history scientific theory and humorous observation *Hollywood Science* features dozens of film stills and a list of the all time best and worst science fiction movies

Asteroids Edward C. Blair, 2002 With the bulk of asteroids floating in space between the orbits of Mars and Jupiter astronomers puzzle over where these rocks came from Are they the remnants of a planet Excess not used in the formation of the Solar System Nothing more than random bits of debris The location of the belt makes for a quasi barrier separating the inner from the outer planets Perhaps

asteroids were meant to discourage human space exploration NASA has sent missions to explore the asteroid belt and the rocks themselves and those missions have yielded some interesting observations on the composition of the asteroids but no definitive answer as to their origin Earth based tools such as telescopes and satellites also contribute to asteroid research but cannot plumb the depths behind these varied chunks of flotsam Presented in this book is a list of carefully chosen abstracts and citations of relevant literature about asteroids and the research into them Prior to this listing though comes an overview of the nature of the asteroids and what we know now about them and what we hope to discover in the future lifeless but mysterious rocks inhabiting the solar system To conclude easy access is provided through author title and subject indexes

Outer Space Development, International Relations and Space Law Edythe Weeks,2013-02-21 It is the eve of outer space development but few people are aware of this In the absence of awareness people cannot prepare for the opportunities that will arise and so the vast wealth likely to flow to Earth from outer space will cause ever greater inequality and instability in our already unequal and unstable world This book is a call to educators to factor equality and diversity into the process of

outer space development by creating a widespread movement to teach outer space development studies to all students especially those who study social and behavioral sciences In calling for this the author is also putting out a call to visionary thinkers to increase public awareness that outer space is already in the process of being developed Her objective is to provide a pedagogical approach aimed at mending the knowledge gap If we fail in this objective we are more likely than ever before to witness ever widening gaps of social and financial inequality The first question that will arise as we embark on this process of course will be Why outer space development People often ask where the money will come from to develop outer space Platinum group metals such as iridium and osmium and various other valuable untapped natural resources have been discovered in abundant quantities and are likely to be mined by companies The discovery of natural resources has sparked development projects in the past These historical patterns of human behavior are occurring again today as companies speed up the process of private spaceship development A myriad of space laws and policies are already in place to support space commercialization Recently the 2010 NASA Authorization Act and various other laws and policies initiated by the US government have placed on the agenda plans to build advanced space transportation systems to privatize spacecraft development to create commercial space habitats space stations and space settlements to initiate commercial space mining to investigate spacecraft trajectory optimization for landing on near Earth asteroids to engage in commercial spaceport construction and interstellar interplanetary international telecommunications and to launch space exploration missions to near Earth asteroids the Moon Mars and Mars s moons US initiatives have in the past been mirrored by the international community and we can expect to see similar patterns arising on a global scale indeed as this book will demonstrate they already are The global community is experiencing economic recession natural disasters lack of opportunity employment anxiety failing K 12 programs widening inequality gaps uprisings revolutions revolts unmet educational goals and a general failure to uplift inspire and provide meaningful opportunities for significant portions of our population People need something that will allow them to focus anew their talents energies abilities and gifts and use this bleak climate as an opportunity for positive change Outer space development is emerging as an answer to this state of crisis The question is To whom will the benefits accrue Many strategic decisions have already been taken regarding space development of which the global general public is unaware Once legal rights to space resources are granted only those with the capital to take advantage of new laws and policies will be in a position to profit from the new space industries Only those who are in a position to know about outer space development will be in position to take advantage of the opportunities It is important to remember that the global general public has for several decades been paying the start up costs for space exploration research science and technology It s not too late to factor in equality before an infrastructure of inequality is forever with us as we venture to establish the final frontier
