 Cope,Steven D. Pletcher,Kristi Biswas,2021-11-23 Innate Immunity to Pulmonary Infection Derek J. Chadwick,Jamie A.
 Goode,2007-01-11 Part of the prestigious Novartis Foundation series this volume uniquely addresses the use of innate
 immunity to treat or prevent infectious diseases of the lung Innate Immunity to Pulmonary Infection Provides a
 comprehensive overview of pulmonary infectious diseases including basic pathology current and potential therapies and
 detailed consideration of the innate biological resistance mechanisms in the lung Thoroughly examines the major topic of
 innate immunity in immunology which is now seen as key to the pathogenesis of and vaccination strategies for infectious
 diseases Describes the genetic and environmental factors which determine the outcome of infection such as latency of
 Tuberculosis blood stream invasion from local infection and local target tissue damage Covers the roles of cells such as
 neutrophils macrophages and dendritic cells and of molecular components such as Toll like receptors Discusses the clinical
 applications of the new knowledge regarding innate immunity and how this can be used in both treatment and prevention
 vaccination strategies Includes contributions from an international and interdisciplinary group of experts Innate Immunity to
 Pulmonary Infection is an essential resource for researchers in both industry and academia It is of interest for all those
 interested in the disciplines of immunology virology biology biotechnology and genetics *Influence of Dietary Factors,
 Nutrients, and the Gut-Lung Axis on Respiratory Health* Tomoko Suzuki,Naser Alsharairi,Inês Brandão,2025-02-21 Dietary
 habits and nutrients are gaining increasing recognition as modifiable factors influencing respiratory health Food components
 including vitamins minerals fatty acids and bioactive compounds like flavonoids through their antioxidant and anti
 inflammatory properties have been associated with ameliorated lung function and attenuated viral infections To illustrate this
 multiple studies show that the Mediterranean diet known for its emphasis on fruits vegetables whole grains and olive oil has

a beneficial effect on respiratory health Furthermore the dynamic interplay between diet and lungs appears to revolve around the immune system making immune interactions a central topic of discussion The substantial influence of the gut microbiota becomes evident when considering that approximately 70-80% of immune cells reside in the gut Hence the gut microbiota emerges as a crucial mediator of the impact of food on health including respiratory health Gut dysbiosis is believed to be associated with the etiology of respiratory lung diseases such as asthma COPD chronic bronchitis emphysema and lung cancer Microbiota derived metabolites such as short chain fatty acids SCFAs produced from the fermentation of non digestible carbohydrates have been reported to regulate gut inflammation Probiotics SCFAs bioactive compounds and dietary fiber as well as restricted dietary patterns have been shown to reduce gut inflammation and play a protective role in respiratory diseases However the exact mechanisms underlying these processes are still to be unravelled

Immunotoxicity, Immune Dysfunction, and Chronic Disease Rodney R. Dietert, Robert W. Luebke, 2012-06-05 Chronic diseases are the leading cause of deaths worldwide and according to the World Economics Council and the Harvard School of Public Health the cost of chronic diseases is expected to reach a staggering 48% of global gross domestic product by the year 2030 The urgency of the issue was demonstrated in 2011 when for only the second time in its existence the U N General Assembly brought a health issue to the floor for consideration chronic diseases To date most considerations of the issue have approached the topic from the vantage point that chronic diseases are a myriad of largely unconnected diseases and conditions arising in diverse tissues organs and physiological systems This book Immunotoxicity Immune Dysfunction and Chronic Disease deviates from that prior model It considers the interconnectivity of chronic diseases with both environmental insult of the immune system and subsequent immune dysfunction and inflammatory dysregulation as the underlying basis for many if not most chronic diseases This change in the perception of environment immune linkages to chronic disease is significant and has immediate implications both for the prevention of disease as well as for the development of more effective therapeutic approaches Rather than considering environmental factors and types of reported immune alterations e g depressed humoral immunity as is common in books involving immunotoxicity the present book approaches the environment immune disease triad from the standpoint of the disease Each chapter emphasizes one or more specific immune dysfunction

based chronic disease s or condition s e g asthma atherosclerosis multiple sclerosis lupus and describes 1 the suggested environmental risk factors 2 the underlying immune dysfunction s associated with the disease and 3 the overall health consequences of the disease This book is an early entry for a new Toxicology book series for Springer titled Molecular and Integrative Toxicology MaIT The series will feature detailed research information but in the context of a more integrative or holistic framework As part of this framework the chapters will contain a section on Key Points as well as Recommendations where appropriate The goal is to cover the most timely state of the art issues in toxicology as well as to ensure that the information is maximally accessible for research scientists teachers physicians and students We are particularly grateful to the numerous chapter authors for providing comprehensive and expert disease oriented contributions We are also appreciative of their willingness to consider their material not as disparate pieces of what has become a major health crisis but rather as key pieces in a network of apparently interconnected health challenges The Immunological Implications of the Hygiene Hypothesis Idoia Postigo, Petra Ina Pfefferle, Holger Garn, 2021-10-01
