Minimum Animal Populations Hermann Remmert, 2012-12-06 H REMMERT Small populations are very often discussed but there seems to be no general overview touching all the self evident but normally simply neglected problems connected with small populations First there are many very different types of organisms and as every biologist should know the problems of small populations are very different in different types of organisms 1 In vascular plants the problems are different from the situation in birds and mammals in marine benthic animals or in parasites such as tapeworms the problems are different again and in seasonal planktonic animals or insects they are different from those in biotopes under constant conditions In tapeworms or in vascular plants an adult organism seems to be comparable to a population of mammals or birds because its offspring can be so diverse and plentiful 2 There are small populations which explode and break down to a small population again and then explode and break down again Birds in Their Habitats Ian Fraser, 2018-03 Everywhere we go there are birds and they all have mysteries to be unravelled These mysteries include the way they look from bizarre to apparently mundane why they live where they live and the things they do many of which are far too incredible ever to be imagined as fiction Birds in Their Habitats is a collection of stories and experiences which introduce fascinating aspects of birdlife ecology and behaviour Informed by a wealth of historical and contemporary research Ian Fraser takes the reader on a journey through four continents from places as unfamiliar as the Chonos Archipelago of southern Chile and the arid Sahel woodlands of northern Cameroon to those as familiar as a suburban backyard This is a
