Edridge, 2012-06 A new and inspiring view of creation and the Flood After the Beginning offers compelling insight

about God's purpose for an eternal loving relationship with mankind that was made in His image. This theme is revealed in Genesis with the creation of Adam and Eve with the animals named by Adam and with the animals that were saved on the ark. From creation through the Flood, Dr. Edridge concludes that the creatures described in Genesis had emotional capability such as mammals and birds. Further consideration of species that should be included in the creation narrative leads to agreement between the biblical sequence of creation and the scientific chronology of the fossil record and the early stages of the Earth's development. Dr. Edridge examines different flood models to determine if they are consistent with biblical parameters and scientific scrutiny. Based on documented flood records and geological events, he proposes a new catastrophic Flood Model that meets both qualitative and quantitative requirements for the most likely flooded area, the cradle of civilization. This model is unique, providing a viable mechanism that caused the Flood to subside but which agrees with the biblical description.

The Geochemical Origin of Microbes William F. Martin, Karl Kleinermanns, 2024-06-27. This is a textbook covering the transition from energy-releasing reactions on the early Earth to energy-releasing reactions that fueled growth in the first microbial cells. It is for teachers and college students with an interest in microbiology, geosciences, biochemistry, evolution, or all of the above. The scope of the book is a quantum departure from existing origin-of-life books in that it starts with basic chemistry and links energy-releasing geochemical processes to the reactions of microbial metabolism. The text reaches across disciplines, providing students of the geosciences an origins biology interface and bringing a geochemistry origins interface to students of microbiology and evolution. Beginning with physical chemistry and transitioning across metabolic networks into microbiology, the timeline documents chemical events and organizational states in hydrothermal vents, the only environments known that bridge the gap between spontaneous chemical reactions that we can still observe in nature today and the physiology of microbes that live from H_2 , CO_2 , ammonia, phosphorus, inorganic salts, and water. Life is a chemical reaction. What it is and how it arose are two sides of the same coin. Key Features: Provides clear connections between geochemical reactions and microbial metabolism; Focuses on chemical mechanisms and transition metals; Richly illustrated with color figures explaining reactions and processes; Covers the origin of the Earth, the origin of metabolism, the origin of protein synthesis, and genetic information, as well as the escape into the wild of the first free-living cells, Bacteria, and Archaea.

Existence, Origin And Weird Technology: Exploring Humanity's Ultimate Questions Pentti O. Haikonen, 2022-10-21. What are we humans and how did we become the high technology species?
