

Project 1

Introduction

The first part of the project is to understand the problem and the data. This involves reading the problem statement and the data description, and then exploring the data to get a sense of its structure and content. The second part is to design a solution, which involves choosing a model and a set of features, and then training the model on the data. The third part is to evaluate the solution, which involves testing the model on new data and comparing its performance to a baseline.

The fourth part is to implement the solution, which involves writing code to train and evaluate the model. The fifth part is to present the results, which involves writing a report and creating a presentation. The sixth part is to reflect on the project, which involves thinking about what was learned and what could be improved. The seventh part is to conclude the project, which involves summarizing the results and the lessons learned.
