Bitten Bites And Stings From Around The World:

Bitten Pamela Nagami, 2005 **Comprehensive Approach to Infections in Dermatology** Archana Singal, Chander Grover, 2016-02-12

Comprehensive Approach to Infections in Dermatology is a guide to all types of skin infection with detailed information on epidemiology presentation diagnosis and management. The book is divided into eight sections: the first deals with normal flora of the skin; microorganisms present under normal circumstances without causing disease; whilst each subsequent chapter covers a specific type of dermatological infection including bacterial, fungal, viral and mycobacterial infections; parasitic and protozoal diseases; infestations; bites and stings; and finally sexually transmitted infections. The book provides a step by step approach to bedside diagnostic procedures with key points highlighted throughout. 400 full colour clinical photographs illustrate the methods covered and data graphics and evidence based therapeutic guidelines are presented in tables for ease of reference. **Key Points** Covers all types of skin infection in detail with epidemiology presentation diagnosis and management. Step by step guidance on diagnostic procedures. 400 full colour photographs. **Bitten** Pamela Nagami, 2005-09-01

We've all been bitten. And we all have stories. The bite attacks featured in this dramatic book take place in big cities, small towns and remote villages around the world and throughout history. Some are as familiar and contemporary as encounters with mosquitoes in New York City and snakes in southern California's Hollywood Hills, or as exotic and foreign as the tsetse in equatorial Africa, the camel in Riyadh and the Komodo dragon in Indonesia. While others, such as people biting other people, well, these are in a category of their own. Among the startling stories and fascinating facts in **Bitten**:

- o A six year old girl descends into weeks of extreme lassitude until a surgeon plucks an engorged tick from her scalp.
- o A diabetic living in the West Indies awakes one morning to a rat eating his left great and second toes.
- o A twenty eight year old man loses a third of his nose to a bite by his wife.
- o In San Francisco, after a penile bite, a man develops flesh eating strep which spreads to his lower abdomen.
- o Severe bites by rabid animals to the face and digits, because of their rich nerve supply, are the most likely to lead to rabies and have the shortest incubation periods.
- o Following the bite of a seal or contact with its tissues, sealers develop such agonizing pain and swelling in their bites that far from medical care they sometimes amputate their own fingers.
- o Perhaps the most devastating human bite wound injuries are those involving the nose. Doctors in Boroko near Papua New Guinea reported a series of ninety five human bites treated in the Division of Surgery from 1986 to 1992: twelve were to the nose, nine in women and three in men, and in most of the cases the biter was an angry spouse.

With reports from medical journals, case histories, colleagues and from her own twenty eight year career as a practicing physician and infectious diseases specialist, Pamela Nagami's **Bitten** offers readers intrigued by human infection and disease and mesmerized by creatures in the wild, a compulsively readable narrative that is entertaining, sometimes disgusting and always enjoyable.
