Lea,John R. Piggott,2013-04-17 The production of fermented beverages is nowadays a technically sophisticated business Many people outside it however even if they are familiar with the food industry overall fail to appreciate just what advances have been made in the last twenty or thirty years In part this is due to the blandishments of advertising which tend to emphasise the traditional image for mass market promotion at the expense of the technological skills and in part due to a lack of readily available information on the production pro cesses themselves This book attempts to remedy the balance and to show that far from being a quaint and rustic activity the production of fermented beverages is a skilled and sophisticated blend of tradition and technology We have chosen to organise the book principally by individual beverages or groups of beverages with the addition of a number of general chapters to cover items of common concern such as fermentation biochemistry adulteration filtration and flavour aspects While we have tried to eliminate excessive duplication of information we make no apologies for the fact that certain important aspects e g the role of sulphur dioxide in wine and cidermaking are discussed on more than one occasion This only serves to underline their importance and to ensure that each chapter is moderately self contained Aṣṭāṅgahrdaya G.R. Lectures on the Materia Medica Charles Alston, 1770 [A Golden Inheritance](#) Reese Rockwell, 1884 [The Origins of Human Diet and Medicine](#) Timothy Johns, 1996-01-01 People have always been attracted to foods rich in calories fat and protein yet the biblical admonition that meat be eaten with bitter herbs suggests that unpalatable plants play an important role in our diet So called primitive peoples show a surprisingly sophisticated understanding of how their bodies interact with plant chemicals which may allow us to rediscover the origins of diet by retracing the paths of biology and culture The domestication of the potato serves as the focus of Timothy Johns s interdisciplinary study which forges a bold synthesis of ethnobotany and chemical ecology The Aymara of highland Bolivia have long used varieties of potato containing potentially toxic levels of glycoalkaloids and Johns proposes that such plants can be eaten without harm owing to human genetic modification and cultural manipulation Drawing on additional fieldwork in Africa he considers the evolution of the human use of plants the ways in which humans obtain foods from among the myriad poisonous and unpalatable plants in the environment and the consequences of this history for understanding the basis of the human diet A natural corollary to his investigation is the origin of medicine since the properties of plants that make them unpalatable and toxic are the same properties that make them useful pharmacologically As our species has adapted to the use of plants plants have become an essential part of our internal ecology Recovering the ancient wisdom regarding our interaction with the environment preserves a fundamental part of our human heritage
