Mathematical Software - ICMS 2010 Komei Fukuda, Joris van der Hoeven, Michael Joswig, Nobuki Takayama, 2010-08-30 The ICMS Developer's Meeting is an international congress for which the main theme is mathematical software. The 2010 meeting was the third of a series of meetings of similar theme, the first being held in Beijing, China in 2002 and the second in Castro Urdiales, Spain in 2006. The field of mathematics has numerous branches and in each branch we find that algorithms and also implementations and applications of software systems are studied. Researchers who endeavor to make such studies also have international meetings within their specific branches of mathematics and these meetings have made significant contributions to the fields in which they lie. The ICMS International Congress on Mathematical Software on the other hand is a general, not branch specific meeting on mathematical software which is held every four years and is a rare opportunity for developers of mathematical software from different branches of mathematics as well as mathematicians who are interested in mathematical software to gather together.

Groups St Andrews 1997 in Bath: Volume 2 C. M. Campbell, 1999-02-18 This two volume book contains selected papers from the international conference Groups St Andrews 1997 in Bath. The articles are arranged in roughly alphabetical order and cover a wide spectrum of modern group theory. There are articles based on lecture courses given by five main speakers together with refereed survey and research articles contributed by other conference participants. Proceedings of earlier Groups St Andrews conferences have had a major impact on the development of group theory and these volumes should be equally important.

Groups and Computation III William M. Kantor, Ákos Seress, 2014-01-02 This volume contains contributions by the participants of the conference Groups and Computation which took place at The Ohio State University in Columbus, Ohio in June 1999. This conference was the successor of two workshops on Groups and Computation held at DIMACS in 1991 and 1995. There are papers on permutation group algorithms, finitely presented groups, polycyclic groups and parallel computation providing a representative sample of the breadth of Computational Group Theory. On the other hand, more than one third of the papers deal with computations in matrix groups giving an in-depth treatment of the currently most active area of the field. The points of view of the papers range from explicit computations to group theoretic algorithms to group theoretic theorems needed for algorithm development.

Conjugacy in Finite Classical Groups Giovanni De Franceschi, Martin W. Liebeck, Eamonn A. O'Brien, 2025-05-05 This book provides a comprehensive coverage of the theory of conjugacy in finite classical groups. Given such a classical group G , the three fundamental problems considered are the following: to list a representative for each conjugacy class of G ; to describe the centralizer of each representative by giving its group structure and a generating set; and to solve the conjugacy problem in G , namely given two elements of G establish whether they are conjugate and if so find a conjugating element. The book presents comprehensive theoretical solutions to all three problems and uses these solutions to formulate practical algorithms. In parallel to the theoretical work, implementations of these algorithms have been developed.

in Magma These form a critical component of various general algorithms in computational group theory for example computing character tables and solving conjugacy problems in arbitrary finite groups

Mathematical Software -- ICMS 2014 Hoon Hong, Chee Yap, 2014-08-01 This book constitutes the proceedings of the 4th International Conference on Mathematical Software ICMS 2014 held in Seoul South Korea in August 2014 The 108 papers included in this volume were carefully reviewed and selected from 150 submissions The papers are organized in topical sections named invited exploration group coding topology algebraic geometry surfaces reasoning special Groebner triangular parametric interfaces and general

Finite Geometries, Groups, and Computation Alexander Hulpke, Robert Liebler, Tim Penttila, Akos Seress, 2008-08-22 This volume is the proceedings of a conference on Finite Geometries Groups and Computation that took place on September 4 9 2004 at Pingree Park Colorado a campus of Colorado State University Not accidentally the conference coincided with the 60th birthday of William Kantor and the topics relate to his major research areas Participants were encouraged to explore the deeper interplay between these fields The survey papers by Kantor O'Brien and Penttila should serve to introduce both students and the broader mathematical community to these important topics and some of their connections while the volume as a whole gives an overview of current developments in these fields

The Lifted Root Number Conjecture and Iwasawa Theory Jürgen Ritter, Alfred Weiss, 2002 This paper concerns the relation between the Lifted Root Number Conjecture as introduced in GRW2 and a new equivariant form of Iwasawa theory A main conjecture of equivariant Iwasawa theory is formulated and its equivalence to the Lifted Root Number Conjecture is shown subject to the validity of a semi local version of the Root Number Conjecture which itself is proved in the case of a tame extension of real abelian fields
