Along The Dingo Fence:

Along the Dingo Fence Philip Holden, 2002 *Kangaroos* Terence J. Dawson, 2012 Appreciation of the diversity of kangaroos in Australia and their lifestyles Insight into the ecology of kangaroos as it pertains to conservation issues Provides an understanding of the historical evolution of a major group of Australian mammals This book provides a clear and accessible account of kangaroos showing how their reproductive patterns social structure and other aspects of their biology make them well adapted to Australia's harsh climate and demanding environment Since the last edition of this book nearly 20 years ago much more is now known about the biology and ecology of these iconic animals This completely revised edition describes these new perspectives and attempts to counter the many urban and rural myths that still exist **Meanderings in the Bush** Richard MacMillen, Barbara MacMillen, 2009-07-15 The Channel Country is of special interest because its extreme aridity is disrupted unpredictably by summer monsoonal rains causing massive flooding and is followed by prodigious growth of plants and reproduction of animals before returning to daunting conditions of drought Yet it is a region teeming with life both plant and animal possessing unusual capacities for existing there It is also a region favoured by hardy pastoralists and their livestock who have learned to coexist with this harsh climate In *Meanderings in the Bush* the authors describe their many adventures and misadventures in the region with its climate its animals and its human inhabitants They also discuss results of their research which reveals some of the secrets for survival of many of the native animals including marsupials rodents birds and the remarkable desert crab These studies are cast in the light of both the prehistoric and historic records of the Lake Eyre Basin including the probable impacts of changing and or stable climates Aboriginal occupation later European pastoral development and the influences of introduced exotic mammals **Not Every Dog Has His Day** Jane Duckworth, 2009 Provides a balanced view on the many issues relating to the treatment and care of Australian dogs The Dingo Debate Bradley Smith, 2015-08-03 The Dingo Debate explores the intriguing and relatively unknown story of Australia's most controversial animal the dingo Throughout its existence the dingo has been shaped by its interactions with human societies With this as a central theme the book traces the story of the dingo from its beginnings as a semi domesticated wild dog in South east Asia to its current status as a wild Australian native animal under threat of extinction It describes how dingoes made their way to Australia their subsequent relationship with Indigenous Australians their successful adaption to the Australian landscape and their constant battle against the agricultural industry During these events the dingo has demonstrated an unparalleled intelligence and adaptable nature seen in few species The book concludes with a discussion of what the future of the dingo in Australia might look like what we can learn from our past relationship with dingoes and how this can help to allow a peaceful co existence The Dingo Debate reveals the real dingo beneath the popular stereotypes providing an account of the dingo's behaviour ecology impacts and management according to scientific and scholarly evidence rather than hearsay This book will appeal to anyone with an interest in Australian natural history wild

Dickman,Daniel Lunney,2001 [Fencing for Conservation](#) Michael J. conservation areas are unlikely to be successful in the light of human encroachment. It may be that some form of overt display is necessary to ensure the protection of reserves. This may be signage, presence of guards, rangers or physical fencing structures. The need for some form of barrier goes beyond restricting human access. The megafauna of Africa pose a genuine threat to human survival. In southern Africa, fences keep animals in and protect the abutting human population. Elsewhere, fencing is not considered important or viable. Where poverty is rife, it won't take much to tip the balance from beneficial conservation areas to troublesome repositories of crop raiders, diseases and killers. Conversely, in New Zealand, fences are used to keep animals out. Introduced species have decimated New Zealand's endemic birds, reptiles and invertebrates, and several sites have been entirely encapsulated in mouse-proof fencing to ensure their protection. Australia faces the same problems as New Zealand, however, surrounds its national parks with cattle fences. Foxes and cats are free to enter and leave at will, resulting in rapid recolonisation following poisoning campaigns. How long will these poison campaigns work before tolerance, aversion or resistance evolves in the introduced predator populations?

Why Does the World Stay Green? Thomas C. R. White, 2005. The theory explored in this book contends that animals are not controlled through predation but because they cannot obtain enough of the food they must have to reproduce and grow. This book explains how this comes about in nature and describes some of the ways in which animals have evolved to cope.

Carnivores of Australia Alistair Glen, Christopher Dickman, 2014-11-05. The Australian continent provides a unique perspective on the evolution and ecology of carnivorous animals. In earlier ages, Australia provided the arena for a spectacular radiation of marsupial and reptilian predators. The causes of their extinctions are still the subject of debate. Since European settlement, Australia has seen the extinction of one large marsupial predator, the thylacine; another, the Tasmanian devil, is in danger of imminent extinction, and still others have suffered dramatic declines. By contrast, two recently introduced predators, the fox and cat, have been spectacularly successful with devastating impacts on the Australian fauna. *Carnivores of Australia: Past, Present and Future* explores Australia's unique predator communities from pre-historic, historic and current perspectives. It covers mammalian, reptilian and avian carnivores, both native and introduced to Australia. It also examines the debate surrounding how best to manage predators to protect livestock and native biodiversity. Readers will benefit from the most up-to-date synthesis by leading researchers and managers in the field of carnivore biology. By emphasising Australian carnivores as exemplars of flesh eaters in other parts of the world, this book will be an important reference for researchers, wildlife managers and students worldwide.

Dingo Brad Purcell, 2010-09-01. Many present-day Australians see the dingo as a threat and a pest to human production systems. An alternative viewpoint, which is more in tune with Indigenous culture, allows others to see the dingo as a means to improve human civilisation. The dingo has thus become trapped between the status of pest animal and totemic creature. This book helps readers to recognise this dichotomy, as a deeper understanding of dingo behaviour is now possible through new technologies which have made it easier to monitor their daily lives. Recent research on genetic

structure has indicated that dingo purity may be a human construct and the genetic relatedness of wild dingo packs has been analysed for the first time GPS telemetry and passive camera traps are new technologies that provide unique ways to monitor movements of dingoes and analyses of their diet indicate that dietary shifts occur during the different biological seasons of dingoes showing that they have a functional role in Australian landscapes Dingo brings together more than 50 years of observations to provide a comprehensive portrayal of the life of a dingo Throughout this book dingoes are compared with other hypercarnivores such as wolves and African wild dogs highlighting the similarities between dingoes and other large canid species around the world
