Inherently-sustainable Technology Development Arjun B.

Chhetri,Rafiqul Islam,2008 Presents the research findings in modern technological developments based on synthetic chemicals that are highly toxic to the human environment This book includes various types of appropriate energy

technologies suitable for cooking heating lighting transportation and industrial usage **The Solar House** Daniel D. Chiras, 2002-10-01 Passive solar heating and passive cooling approaches known as natural conditioning provide comfort throughout the year by reducing or eliminating the need for fossil fuel Yet while heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Now Dan Chiras author of the popular book *The Natural House* brings those principles up to date for a new generation of solar enthusiasts The techniques required to heat and cool a building passively have been used for thousands of years Early societies such as the Native American Anasazis and the ancient Greeks perfected designs that effectively exploited these natural processes The Greeks considered anyone who didn't use passive solar to heat a home to be a barbarian In the United States passive solar architecture experienced a major resurgence of interest in the 1970s in response to crippling oil embargoes With grand enthusiasm but with scant knowledge and sometimes little common sense architects and builders created a wide variety of solar homes Some worked pretty well but looked more like laboratories than houses Others performed poorly overheating in the summer because of excessive or misplaced windows and skylights and growing chilly in the colder months because of insufficient thermal mass and insulation and poor siting In *The Solar House* Dan Chiras sets the record straight on the vast potential for passive heating and cooling Acknowledging the good intentions of misguided solar designers in the past he highlights certain egregious and entirely avoidable errors More importantly Chiras explains in methodical detail how today's home builders can succeed with solar designs Now that energy efficiency measures including higher levels of insulation and multi layered glazing have become standard it is easier than ever before to create a comfortable and affordable passive solar house that will provide year round comfort in any climate Moreover since modern building materials and airtight construction methods sometimes result in air quality and even toxicity problems Chiras explains state of the art ventilation and filtering techniques that complement the ancient solar strategies of thermal mass and daylighting Chiras also explains the new diagnostic aids available in printed worksheet or software formats allowing readers to generate their own design schemes *Energy in America* Ingrid Kelley, 2008 Scientists tell us we need to cut carbon emissions immediately to forestall effects of global warming Reducing fossil fuel use is the key and energy experts are hard at work devising solutions Engineers create remarkable clean energy technologies Energy policy analysts invent carbon credits and renewable portfolio standards Fossil energy industrialists promise new clean technology Renewable energy industrialists compete to develop the magic bullet for transportation fuel or power generation Every idea is designed to change the nation's energy sector to one that is clean and sustainable for the future But what is this energy sector we have and how did it come about Design professionals planners elected officials and community leaders are under tremendous pressure to find solutions to climate change They need a broader view of America's relationship with energy to gain perspective on how new ideas might work *Energy in America* tells this story emphasizing that energy use has always been based on cultural factors as well as

technology Energy in America relates how coal oil and natural gas built the nation from its beginning and created today s consumer culture It continues with the rise of the electric utility industry and its influence on American society Finally it explores the 1970s when America woke to conservation and efficiency and the renewable energy industries were born It concludes with a look at the future possibilities for community energy planning and current trends in sustainable energy policy The book features a comprehensive energy timeline from 1775 to the present Each chapter provides primary web sources and the book contains a complete index
