Feiring, 2013-11-27 *Computed Tomography in Head Injuries* W. Lanksch, T. Grumme, E. Kazner, 2012-12-06 The introduction of computed tomography in the diagnosis of pathological intracranial conditions has had considerable significance in cases of cranio cerebral injury The decisive diagnostic advantage lies in the possibility of demonstrating both gross pathological change directly as well as secondary changes in normal brain structures Computed tomography has proved its considerable worth especially in evaluation of patients with craniocerebral injury and its sequelae The capabilities of CT were quickly recognized and use of the technique spread rapidly It is likely that CT will be available within a few years in all hospitals and clinics treating patients with craniocerebral injury We believe it appropriate to present a detailed report on our experience with CT in 1800 cases of craniocerebral injury treated in the neurosurgical departments in Miinchen GroBhadern and Berlin Charlottenburg over a period of five years Both acute posttraumatic complications and late sequelae are discussed extensively A large number of illustrations is provided in order to facilitate the reader's introduction to CT diagnosis The great interest in our conjoint study originally published in the German language induced us to translate this book and to update the clinical material We wish to thank the Stiftung Volkswagenwerk the Senat of Berlin the Ludwig Maximilians Universitat in Munich and the Freie Universitat of Berlin for the generous financial support which made this study possible *Index-catalogue of the Library of the Surgeon-General's Office, United States Army National Library of Medicine (U.S.)*, 1922 *A Survey of Current Head Injury Research* National Advisory Neurological Diseases and Stroke Council.
