Using a series of current and futuristic examples (appliances, personal assistants, robots, driverless cars, customer care, engineering, monetization, and many more), the book covers use cases, technology, and communication aspects of how machines will support individuals and organizations. This book examines the Cognitive Things covering a number of important questions: What are Cognitive Things? What applications can be driven from Cognitive Things today and tomorrow? How will these Cognitive Things collaborate with each and other with individuals and with organizations? What is the cognitive era? How is it different from the automation era? How will the Cognitive Things support or accelerate human problem solving? Which technical components make up cognitive behavior? How does it redistribute the work load between humans and machines? What types of data can be collected from them and shared with external organizations? How do they recognize and authenticate authorized users? How is the data safeguarded from potential theft? Who owns the data and how are the data ownership rights enforced? Overall, Sathi explores ways in which Cognitive Things bring value to individuals as well as organizations and how to integrate the use of the devices into changing organizational structures. Case studies are used throughout to illustrate how innovators are already benefiting from the initial explosion of devices and data.
