On-line Analytical Processing Systems for Business Robert J. Thierauf, 1997-09-30 On line analytical processing OLAP is clearly a new approach to information system technology offering a much needed way to make informed decisions better and faster One of its most important characteristics is multidimensional analysis analysis that goes beyond the conventional two dimensional analysis and provides users with rapid retrieval of data from organizational databases data warehouses or both Not only that but most importantly says Dr Thierauf it allows users to look at different dimensions of the same data thus enabling them to

do analyses across departmental and even corporate boundaries How it works and OLAP's many benefits to aid users in the public and private sectors is spelled out here comprehensively yet concisely and with the author's customary well developed examples and clear prose His book will be important reading for people at all levels of management and in all types of organizations Another way of viewing OLAP is getting a typical company out of the custom report writing business and into the data cube server building business An OLAP data structure can be thought of as a Rubik's Cube of data that users can twist and twirl in different ways to work through what if and what happened scenarios to get at the whys of the situation Within an OLAP environment the focus is on performing dictionary definition and maintenance as well as mapping flat files or relational columns to dimensions and measures Although this may sound like a lot of work managing one data cube is more efficient than writing a number of custom reports Currently some vendors provide administrative tools to get the data into the cubes in the first place in the proper form and on a regular basis Hence the job of managing data has been simplified for users

Thierauf,1999-07-30

Until now business systems have focused on selected data within a certain context to produce information. A better approach says Thierauf is to take information accompanied by experience over time to generate knowledge. He demonstrates that knowledge management systems can be used as a source of power to outmaneuver business competitors. Knowledge discovery tools enable decision makers to extract the patterns, trends, and correlations that underlie the inner and outer workings of a company. His book is the first comprehensive text to define this important new direction in computer technology and will be essential reading for MIS practitioners, systems analysts, and academics researching and teaching the theory and applications of knowledge management systems. Thierauf centers on leveraging a company's knowledge capital. Indeed, knowledge is power: the power to improve customer satisfaction, marketing and production methods, financial operations, and other functions. Thierauf shows how knowledge when developed and renewed can be applied to a company's functional areas and provide an important competitive advantage. By utilizing some form of internal and external computer networks and providing some type of knowledge discovery software that encapsulates usable knowledge, Thierauf shows how to create an infrastructure to capture knowledge, store it, improve it, clarify it, and disseminate it throughout the organization, then how to use it regularly. His book demonstrates clearly how knowledge management systems focus on making knowledge available to company employees in the right format at the right time and in the right place. The result is inevitably a higher order of intelligence in decision making, more so now than could ever have been possible in even the most recent past.
