Almost Periodic Functions:

Almost Periodic Functions A. S. Besicovitch, 1954 *Almost-Periodic Functions and Functional Equations* L. Amerio, G. Prouse, 2013-11-11 The theory of almost periodic functions with complex values created by H Bohr 1 in his two classical papers published in Acta Mathematica in 1925 and 1926 has been developed by many authors and has had noteworthy applications we recall the works of Weyl De la Vallee Poussin Bochner Stepanov Wiener Besicovic Favard Delsarte Maak Bogoliubov Levitan This subject has been widely treated in the monographs by Bohr 2 Favard 1 Besicovic 1 Maak 1 Levitan 1 Cinquini 1 Corduneanu 1 2 An important class of almost periodic functions was studied at the beginning of the century by Bohl and Esclangon Bohr's theory has been extended by Muckenhoupt 1 in a particular case and subsequently by Bochner 1 and by Bochner and Von Neumann 1 to very general abstract spaces The extension to Banach spaces is in particular of great interest in view of the fundamental importance of these spaces in theory and application **Almost**

Periodic Functions Harald Bohr, 2018-08-02 Starting with a discussion of periodic functions this groundbreaking exposition advances to the almost periodic case An appendix covers the almost periodic functions of a complex variable 1947 edition

Almost Periodic Functions and Differential Equations B. M. Levitan, V. V. Zhikov, 1982-12-02 *Weakly Almost Periodic Functions on Semigroups* R. B. Burckel, 1970 **Selected Topics in Almost Periodicity** Marko Kostić, 2021-11-22

Covers uniformly recurrent solutions and almost periodic solutions of abstract Volterra integro differential equations as well as various generalizations of almost periodic functions in Lebesgue spaces with variable coefficients Treats multi dimensional almost periodic type functions and their generalizations in adequate detail Almost Periodic and Almost Automorphic Functions in Abstract Spaces Gaston M. N'Guérékata, 2021-05-28 This book presents the foundation of the theory of almost automorphic functions in abstract spaces and the theory of almost periodic functions in locally and non locally convex spaces and their applications in differential equations Since the publication of Almost automorphic and almost periodic functions in abstract spaces Kluwer Academic Plenum 2001 there has been a surge of interest in the theory of almost automorphic functions and applications to evolution equations Several generalizations have since been introduced in the literature including the study of almost automorphic sequences and the interplay between almost periodicity and almost automorphic has been exposed for the first time in light of operator theory complex variable functions and harmonic analysis methods As such the time has come for a second edition to this work which was one of the most cited books of the year 2001 This new edition clarifies and improves upon earlier materials includes many relevant contributions and references in new and generalized concepts and methods and answers the longtime open problem What is the number of almost automorphic functions that are not almost periodic in the sense of Bohr Open problems in non locally convex valued almost periodic and almost automorphic functions are also indicated As in the first edition materials are presented in a simplified and rigorous way Each chapter is concluded with bibliographical notes showing the original sources of the results and further reading

Almost Periodic Type Functions and Ergodicity Zhang

Chuanyi, 2012-10-04 The theory of almost periodic functions was first developed by the Danish mathematician H Bohr during 1925-1926. Then Bohr's work was substantially extended by S Bochner, H Weyl, A Besicovitch, J Favard, J von Neumann, V V Stepanov, N N Bogolyubov and others. Generalization of the classical theory of almost periodic functions has been taken in several directions. One direction is the broader study of functions of almost periodic type. Related to this is the study of ergodicity. It shows that the ergodicity plays an important part in the theories of function spectrum, semigroup of bounded linear operators and dynamical systems. The purpose of this book is to develop a theory of almost periodic type functions and ergodicity with applications in particular to our interest in the theory of differential equations, functional differential equations and abstract evolution equations. The author selects these topics because there have been many excellent books on almost periodic functions and relatively few books on almost periodic type and ergodicity. The author also wishes to reflect new results in the book during recent years. The book consists of four chapters. In the first chapter we present a basic theory of four almost periodic type functions. Section 1.1 is about almost periodic functions. To make the reader easily learn the almost periodicity we first discuss it in scalar case. After studying a classical theory for this case we generalize it to finite dimensional vector valued case and finally to Banach valued including Hilbert valued situation.

Almost Automorphic Type and Almost Periodic Type Functions in Abstract Spaces Toka Diagana, 2013-08-13 This book presents a comprehensive introduction to the concepts of almost periodicity, asymptotic almost periodicity, almost automorphy, asymptotic almost automorphy, pseudo almost periodicity and pseudo almost automorphy as

well as their recent generalizations Some of the results presented are either new or else cannot be easily found in the mathematical literature Despite the noticeable and rapid progress made on these important topics the only standard references that currently exist on those new classes of functions and their applications are still scattered research articles One of the main objectives of this book is to close that gap The prerequisites for the book is the basic introductory course in real analysis Depending on the background of the student the book may be suitable for a beginning graduate and or advanced undergraduate student Moreover it will be of a great interest to researchers in mathematics as well as in engineering in physics and related areas Further some parts of the book may be used for various graduate and undergraduate courses **Pseudo Almost Periodic Functions in Banach Spaces** Toka Diagana, 2007

Almost-periodic Functions in Abstract Spaces Samuel Zaidman, 1985 This research not presents recent results in the field of almost periodicity The emphasis is on the study of vector valued almost periodic functions and related classes such as asymptotically almost periodic or almost automorphic functions Many examples are given and applications are indicated The first three chapters form a self contained introduction to the study of continuity derivability and integration in locally convex or Banach spaces The remainder of the book is devoted to almost periodicity and related topics The functions are defined on $\mathbb{R}$ or an abstract group the range is a Banach or a Hilbert space Although treatment of the material related to pure mathematics the theory has many applications in the area of abstract differential equations **Almost**

Automorphic and Almost Periodic Functions in Abstract Spaces Gaston M. N'Guérékata, 2001-11-30 Almost Automorphic and Almost Periodic Functions in Abstract Spaces introduces and develops the theory of almost automorphic vector valued functions in Bochner's sense and the study of almost periodic functions in a locally convex space in a homogenous and unified manner It also applies the results obtained to study almost automorphic solutions of abstract differential equations expanding the core topics with a plethora of groundbreaking new results and applications For the sake of clarity and to spare the reader unnecessary technical hurdles the concepts are studied using classical methods of functional analysis Integration of Asymptotically Almost Periodic Functions and Weak Asymptotic Almost Periodicity W.
