Amino Acid Availability and Brain Function in Health and Disease Gerald Huether, 2013-06-29 The picture on the following page is being reproduced here at the request of the participants in the Advanced Research Workshop Amino Acid Availability and Brain Function in Health and Disease I displayed this limewood carving entitled Neurochemistry during my closing remarks to this extraordinarily stimulating and productive workshop so ably organized by my collaborator Dr Gerald Huether We scientists need two sturdy legs to carry us through all the twists and turns of our academic careers We should also have as it were a reserve leg handy to help us stay upright when this career ends My third leg is wood carving The idea for Neurochemistry came to me in the plane carrying me to the congress of the International Neurochemical Society in Jerusalem We need the hands for our meticulous experimental work and at least one ear to listen to the messages our neurons send us A few years ago it would have been premature to hold a workshop on this subject Now however the time was just right to allow an overview of the status of current research and to point out the promising new openings it has created There is no doubt that the book to be published as a result of this workshop will be for the next years at least the standard text on the subject Heartily thanks to all speakers for their brilliant contributions and to all participants for the lively uninhibited and stimulating discussion

Molecular Basis and Thermodynamics of Bioelectrogenesis E. Schoffeniels, D. G. Margineanu, 1990-10-31 Despite the fact that many years have elapsed since the first microcalorimetric measurements of an action potential were made there is still among the research workers involved in the study of bioelectrogenesis a complete overlooking of the most fundamental principle governing any biological phenomenon at the molecular scale of dimension This is surprising the more so that the techniques of molecular biology are applied to characterize the proteins forming the ionic conducting sites in living membranes For reasons that are still obscure to us the molecular aspects of bioelectrogenesis are completely out of the scope of the dynamic aspects of

biochemistry Even if it is sometimes recognized that an action potential is a free energy consuming entropy producing process the next question that should reasonably arise is never taken into consideration There is indeed a complete evasion of the problem of biochemical energy coupling thus reducing the bioelectrogenesis to only physical interactions of membrane proteins with the electric field the inbuilt postulate is that no molecular transformations in the chemical sense could be involved Alterations of Metabolites in the Nervous System Abel Lajtha,2013-11-11 In neurosciences one may say All roads lead to Rome It seems as though wherever one starts the course of investigation leads to the same major questions about nervous system function and dysfunction In thinking about what to write in this preface it occurred to me that it might be best to deal with that with which I am most familiar and to trace to some extent my own road to Rome As I look over my work of the last 37 years it becomes clear to me that it can be epitomized as a search for patterns What usually began as a single minded devotion to in depth analysis of one or a small number of variables always has led to questions of how the results might relate to the whole living unit whether it is cell tissue or organism For a number of years after my discovery in the vertebrate central nervous system of γ aminobutyric acid GABA and the enzyme which forms it L glutamate decarboxylase GAD and the identification of GABA as a major inhibitory neurotransmitter by others I felt that my laboratory largely biochemical was wandering in the wilderness of the complexities of the vertebrate CNS without definitively coming to terms with problems related to GABAergic transmitter functions and the roles of GABA neurons in information processing
