Challenges and Opportunities for Human Space Exploration United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science and Space, 2015 Issues and Opportunities Regarding the U.S. Space Program National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Pamela L. Whitney, Richard B. Leshner, Radford Byerly, Jr., 2004-03-02 Ever since the completion of the Apollo program there has been a lack of consensus about the future of human spaceflight The Columbia tragedy in February 2003 rekindled public debate about this question In November 2003 the Space Studies Board and the Aeronautics and Space Engineering Board organized a workshop to explore aspects of the question what should be the principal purpose goals and priorities of the U S civil space program This report presents a factual summary of that workshop which identified past lessons learned and guiding principles for the future of the civil space program Seven broad themes emerged from the workshop and these themes are highlighted in the report The report also presents discussions of strategies for the human spaceflight program and guiding principles of and boundary conditions for a 21st century space policy The Bioethics of Space Exploration Konrad Szocik, 2023 The Bioethics of Space Exploration provides a comprehensive discussion of the possible bioethical issues and challenges that may arise when considering future long term space missions Because of numerous threats within the space environment many consider the concept of radically modifying humans to be a serious and perhaps even necessary option Konrad Szocik presents what types of ethical and bioethical challenges may await participants on commercial scientific and colonizing missions and provides a new perspective into the potential for radical biomedical technologies

Commercial Space Exploration Jai Galliot, 2016-03-09 Not since man set foot on the moon over four decades ago has there been such passion and excitement about space exploration This enthusiasm and eagerness has been spurred on by the fact that for the first time since the very beginning of the space age space travel is no longer limited to an elite group of highly trained and well disciplined military officers and test pilots Instead we must understand that the possibility of commercial space travel is already on our horizon and that it comes with a number of significant practical and moral challenges Our level of scientific development and ability to influence international affairs and policy confers upon us an

obligation to study the ethical legal and social considerations associated with space exploration and understanding the potential consequences from the beginning is critical This volume provides the first comprehensive and unifying analysis concerning the rise of private space exploration with a view toward developing policy that may influence real world decision making The plethora of questions demanding serious attention privatisation and commercialisation the impact on the environment health futures risk assessment responsibility and governance are directly addressed in this scholarly work

Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia Gerhard Gerold, Michael Fremerey, Edi Guhardja, 2013-06-29 Southeast Asia constitutes one of the world's most extended rainforest regions It is characterized by a high degree of biodiversity and

contains a large variety of endemic species Moreover these forests provide a number of important and singular ecosystem services like erosion protection and provision of high quality water which cannot be replaced by alternative ecosystems However various forms of encroachment mostly those made by human interventions seriously threaten the continuance of rainforests in this area There is ample evidence that the rainforest resources apart from large scale commercial logging are exposed to danger particularly from its margin areas These areas which are characterized by intensive man nature interaction have been identified as extremely fragile systems The dynamic equilibrium that balances human needs and interventions on the one hand and natural regeneration capacity on the other is at stake The decrease of rainforest resources is to a substantial degree connected with the destabilization of these systems Accordingly the search for measures and processes which prevent destabilization and promote stability is regarded as imperative This refers to both the human and the natural part of the forest margin ecosystem

The American Technological Challenge Jan Vijg, 2011

The American Technological Challenge: Stagnation and Decline in the 21st Century refutes the myth that we live in the most innovative of times. Inventions themselves are only one of the factors that determine the technological fate of a society. Sometimes inventions are adopted and eagerly, sometimes not. The history of technological progress and the historical and societal factors that impel or restrain the adoption of inventions are explored in the book. New life-changing inventions have become rare, and in spite of ample vocal support of innovation, an increasingly

complacent society has lost its taste for risk and often actively resists change Far from being unique technology slowdowns are recurrent events in history occurring in civilizations that have reached the zenith of their success They are the inevitable fate of an increasingly regulated successful society Most people would characterize the dawn of the 21st century as the age of technological progress par excellence If you are one of them then think again While our parents grandparents and great grandparents witnessed life changing inventions every decade very little major new technology has seen the light of day over the last half century We find ourselves in the midst of a technology slowdown This book is about the causes and consequences of technology slowdowns which are not unique but recurrent events in human history They occur not in times of upheaval when violent interstate conflicts are the order of the day Such periods foster innovation and allow major breakthrough inventions to be adopted quickly Instead innovation seriously stalls in times that are peaceful when governments reign supreme and citizens are encapsulated by layers of benign regulation to protect them against all possible harm We find ourselves in the best of times The long period of bloody combat that characterized so much of the 20th century has finally ended Violent conflicts between states are minimal and conditions for almost everyone on the planet are on an upswing with poverty on the decline and life expectancy and literacy increasing Responsible government and industry leaders have begun to refrain from risky bets on exciting new exploits and the time of grand projects such as the Eisenhower Interstate System the Moon Landing Program or the development of the internet is behind us Instead we have to make do with incremental improvements of existing technology catch up programs in developing countries and social programs The consequences are stalling wealth generation and an end to the dramatic changes society has undergone since the industrial revolution now more than 200 years ago
