disability with an estimated 2.5% of children being born with FASD each year in the world. This text provides a comprehensive state of the art review of this field and serves as a valuable resource for clinicians and researchers with an interest in FASD. The book provides a detailed overview for clinicians of various backgrounds on the diagnostic process, extensive mechanistic and embryologic data, neuropsychologic aspects of the condition, prevention and treatment approaches, and the ethical, legal, and policy perspectives that impact patients and families. The chapters are organized parallel to the journey of individuals who experience alcohol-related conditions, beginning with the prenatal period, addressing epidemiology of alcohol exposure, prevention and interventions continuing through the fetal experience, with a focus on embryology. Challenges of children and their families are considered next, including the diagnostic process and health effects. Finally, issues related to systems of care for individuals with FASD and the broader community are addressed. The global context of FASD is presented throughout the textbook. Written by experts in the field, *Fetal Alcohol Spectrum Disorders* provides a concise yet comprehensive summary of the current status of this issue that helps guide prevention efforts, the diagnostic process, school and community interventions, and global policy efforts.

Peters, 2012-12-06 Recent experience with interventions designed to promote the well-being of children and to prevent mental health problems has identified particular challenges in families with disordered parents. These families are often very difficult to engage in mental health promotion and prevention programs, and they may be especially resistant to intervention. *The Effects of Parental Dysfunction on Children* explores the current level of knowledge regarding the processes by which a number of parental disorders influence the developmental outcomes of children. Renowned scientist-practitioners from the United States, Canada, and Australia contributed ten chapters to this volume, addressing the topic of the effects of parental behavioral and emotional disorders on children. The major topics covered by this book focus on children growing up in families in which the parents suffer from major psychosocial difficulties, including schizophrenia, depression, alcoholism, drug addiction, anxiety disorders, intellectual disabilities, and antisocial personality disorder.
