Middleware 2008 Valérie Issarny,Richard E. Schantz,2008-11-23 This volume contains the proceedings of the International Middleware Conference held in Leuven Belgium during December 14 2008 This year marked the ninth rendition of this annual conference in its current format initially opted in 1998 aspiring to

serve as the premier venue focusing exclusively on important middleware results A lot has happened over the intervening 10 year span Middleware has become pervasive in an increasingly interconnected world with its concepts now securely embedded in the notional architectures driving forward the information age The conference continues to be a focal point for important new initiatives and results for new generations of middleware With each succeeding year it has become an even more competitive publishing venue further extending its selectivity this year as well Of the 117 submissions 21 were able to receive acceptance invitations for an acceptance rate of less than 18% Competitive indeed Additionally these submissions continue to come from all over the globe spanning authors from 23 countries A truly world wide endeavor But other things have also changed as we turn the corner on the first decade of this conference In many ways middleware has achieved significant success where it really counts in terms of technical innovations advanced capabilities successful ideas and embedded systems which permeate society industry government and academia With this success comes maturity

Autonomic Communication

Athanasios V. Vasilakos, Manish Parashar, Stamatis Karnouskos, Witold Pedrycz, 2009-09-23 New paradigms for communication networking systems are needed in order to tackle the emerging issues such as heterogeneity complexity and management of evolvable infrastructures In order to realize such advanced systems approaches should become task and knowledge driven enabling a service oriented requirement and trust driven development of communication networks The networking and seamless integration of concepts technologies and devices in a dynamically changing environment poses many challenges to the research community including interoperability programmability management openness reliability performance context awareness intelligence autonomy security privacy safety and semantics This edited volume explores the challenges of technologies to realize the vision where devices and applications seamlessly interconnect intelligently cooperate and autonomously manage themselves and as a result the borders of virtual and real world vanish or become significantly blurred On the Move to Meaningful Internet Systems 2004: OTM 2004 Workshops Zahir Tari, Angelo Corsaro, 2004-10-14 A special mention for 2004 is in order for the new Doctoral Symposium Workshop where three young postdoc researchers organized an original setup and formula to bring PhD students together and allow them to submit their research proposals for selection A limited number of the submissions and their approaches were independently evaluated by a panel of senior experts at the conference and presented by the students in front of a wider audience These students also got free access to all other parts of the OTM program and only paid a heavily discounted fee for the Doctoral Symposium itself In fact their attendance was largely sponsored by the other participants If evaluated as successful it is the intention of the General Chairs to expand this model in future editions of the OTM conferences and so draw in an audience of young researchers to the OnTheMove forum All three main conferences and the associated workshops share the distributed aspects of modern computing systems and the resulting application pull created by the Internet and the so called Semantic Web For DOA 2004 the primary emphasis stayed on the distributed object infrastructure for ODBASE 2004 it was the knowledge bases and methods required for enabling the use of formal semantics and for CoopIS 2004 the main topic was the interaction of such technologies and methods with management issues such as occurs in networked organizations These subject areas naturally overlap and many submissions in fact also treat envisaged mutual impacts among them *Security of Cyber-Physical Systems* Hadis Karimipour, Pirathayini Srikantha, Hany Farag, Jin Wei-Kocsis, 2020-07-23 This book presents a comprehensive overview of security issues in Cyber Physical Systems CPSs by analyzing the issues and vulnerabilities in CPSs and examining state of the art security measures Furthermore this book proposes various defense strategies including intelligent attack and anomaly detection algorithms Today's technology is continually evolving towards interconnectivity among devices This interconnectivity phenomenon is often referred to as Internet of Things IoT IoT technology is used to enhance the performance of systems in many applications This integration of physical and cyber components within a system is associated with many benefits these systems are often referred to as Cyber Physical Systems CPSs The CPSs and IoT technologies are

used in many industries critical to our daily lives CPSs have the potential to reduce costs enhance mobility and independence of patients and reach the body using minimally invasive techniques Although this interconnectivity of devices can pave the road for immense advancement in technology and automation the integration of network components into any system increases its vulnerability to cyber threats Using internet networks to connect devices together creates access points for adversaries Considering the critical applications of some of these devices adversaries have the potential of exploiting sensitive data and interrupting the functionality of critical infrastructure Practitioners working in system security cyber security security and privacy will find this book valuable as a reference Researchers and scientists concentrating on computer systems large scale complex systems and artificial intelligence will also find this book useful as a reference
