Urban Ecology and Global Climate Change Rahul Bhadouria, Shweta Upadhyay, Sachchidanand Tripathi, Pardeep Singh, 2022-04-04. Urban Ecology and Global Climate Change contains the latest practical and theoretical concepts of the emerging issues in urban ecological studies. The authors highlight some of the major challenges currently impeding ecological restoration goals in urbanized regions across the globe. It is sobering that the majority of sustainable development projects are being defeated by the increasing pace of two particular phenomena, namely climate change and urbanization. This book includes coverage of the major threats to biodiversity conservation and the most significant contributors to the deterioration of urban ecosystems. In addition, various case studies that reflect the anthropogenic interventions on ecological restoration are included. The book looks at evolving growth and urbanization, concepts, monitoring of urbanization trends, land use/land cover (LULC) changes in urban and non-urban cities based on the use of open access data, urbanization affecting rural ecology, soil carbon emissions, urban development, human well-being, and case studies of sustainable smart cities. Urban Ecology and Global Climate Change will find an appreciative audience amongst students of urban ecology and environmental policy, as well as policymakers, scientists, and industrialists. The book provides an excellent introduction to the principles of smart city planning and urban sustainability with a view to maintaining ecological and conservation status of urban environments.

Nature-Based Cities Katia Perini, Francesca Mosca, 2025-06-16. This book introduces a groundbreaking approach to urban design addressing site specific challenges arising from the impacts of climate change. It provides an overview of the most relevant climate change impacts and related adaptation strategies aligning with sustainable development goals. Nature based solutions (NBS) are some of the most significant adaptation strategies, yet the book addresses the lack of quantitative approaches for their design. A design approach and related methodology that can be used by designers with different levels of complexity is presented, discussing its applicability and limitations according to selected key performance indicators and related thresholds. Such methodology and the related tools are applied to case studies with a focus on the performance of NBS in improving thermal comfort, microclimate regulation, and reducing flooding risks, stormwater retention. A final workflow for a coupled performance driven design approach is presented for readers, offering a pathway to define design strategies based on site specific key performance indicators. The target audience includes practitioners, urban designers and planners, researchers, and anyone interested in urban environment design, nature based solutions, and computational approaches to sustainable design.
