Challenges In Breast Cancer:

Challenges in Breast Cancer Ian S. Fentiman, 1999-11-08 Each year approximately one million women are diagnosed with breast cancer. This disease is the focus of an enormous amount of research interest and keeping up to date and informed of these latest developments is an almost impossible task. Clinicians need a book where they can read a distilled account of what is really topical in the subject. For the most part this should reflect their primary interest in treating patients. It is also important that they are kept up to speed on the basic science particularly in terms of causal mechanisms and the application of this knowledge into better prevention programmes. *Challenges in Breast Cancer* meets this need by bringing together a series of essays on hot topics in breast cancer in which the authors have been challenged to present a lively and opinionated debate on present knowledge and future developments. These chapters are therefore quite unlike those in standard texts. An additional feature is that the authors have star rated their references to guide the reader towards the best source of further reading. *Challenges in Breast Cancer* is a highly topical book designed for the specialist in search of the latest thinking on the many controversial areas that surround breast cancer.

This is the main concept of Cancer Immunology Project CIP which is a part of Universal Scientific Education and Research Network USERN. Current Challenges in Personalized Cancer Medicine, 2012-12-31 For this volume of *Advances in Pharmacology* we have brought together some of the foremost basic science and clinical researchers to discuss some of the new frontiers in the development of targeted cancer therapy. Although still in its formative stages the development of targeted cancer therapies has already shown incredible promise in a limited number of cancer types. As basic cancer research and drug development continues we expect this number to grow and more patients to benefit from these exciting advances. Through better patient selection and novel strategies to manage resistance a future can be envisaged in which cancer can be reduced to the level of a chronic manageable disease. Brought together some of the foremost basic science and clinical researchers. Part of the renowned *Advances in Pharmacology* Serial Discussion of some of the new frontiers in the development of targeted cancer therapy.
