Problems in Algebraic Number Theory M. Ram Murty, Jody (Indigo) Esmonde, 2005-09-28 Asking how one does mathematical research is like asking how a composer creates a masterpiece No one really knows However it is a recognized fact that problem solving plays an important role in training the mind of a researcher It would not be an exaggeration to say that the ability to do mathematical research lies essentially asking well posed questions The approach taken by the authors in Problems in Algebraic Number Theory is based on the principle that questions focus and orient the mind The book is a collection of about 500 problems in algebraic number theory systematically arranged to reveal ideas and concepts in the evolution of the subject While some problems are easy and straightforward others are more difficult For this new edition the authors added a chapter and revised several sections The text is suitable for a first course in algebraic number theory with minimal supervision by the instructor The exposition facilitates independent study and students having taken a basic course in calculus linear algebra and abstract algebra will find these problems interesting and challenging For the same reasons it is ideal for non specialists in acquiring a quick introduction to the subject
