Bray,2006-05-25 The game of backgammon has developed significantly over the last four to five years It is no coincidence that this development has happened in parallel with the arrival of sophisticated computers Chris Bray is the backgammon columnist for The Independent newspaper in the UK In this anthology of his Independent articles of the last four years the arrival and influence of the silicon players can be clearly traced The material covers not only the development of backgammon theory but also looks at the history of the game such as the advent of the doubling cube and some of the more colourful players who have played the game A menagerie of players such as Barry Bigplay Nigel Natural and Quentin Quickcube help to paint a graphic picture of life in the high stakes chouette the very lifeblood of backgammon Chris s articles are targeted at a broad range of players and everyone from the casual player to the expert will improve their game by

studying the couple of hundred positions in this book Knowledge-Free and Learning-Based Methods in Intelligent Game Playing Jacek Mandziuk, 2010-03-14 Humans and machines are very different in their approaches to game playing. Humans use intuition, perception mechanisms, selective search, creativity, abstraction, heuristic abilities, and other cognitive skills to compensate their comparably slow information processing speed, relatively low memory capacity, and limited search abilities. Machines, on the other hand, are extremely fast and infallible in calculations, capable of effective brute force type search, use unlimited memory resources, but at the same time are poor at using reasoning based approaches and abstraction based methods. The above major discrepancies in the human and machine problem solving methods underlined the development of traditional machine game playing as being focused mainly on engineering advances rather than cognitive or psychological developments. In other words, as described by Winkler and Furnkranz [347-348] with respect to chess, human and machine axes of game playing development are perpendicular, but the most interesting, most promising, and probably also most difficult research area lies on the junction between human compatible knowledge and machine compatible processing. I undoubtedly share this point of view and strongly believe that the future of machine game playing lies in implementation of human type abilities: intuition, creativity, selective attention, and other while still taking advantage of intrinsic machine skills. The book is focused on the developments and prospective challenging problems in the area of mind game playing, i.e. playing games that require mental skills using Computational Intelligence (CI) methods, mainly neural networks, genetic evolutionary programming, and reinforcement learning.
