Titus, 1986 **Global Environmental Change** Kirill Y. Kondratyev, Vladimir F. Krapivin, Gary W. Phillippe, 2013-06-29 The growing number of published works dedicated to global environmental change leads to the realization that protection of the natural environment has become an urgent problem The question of working out principles of co evolution of man and nature is being posed with ever increasing persistence Scientists in many countries are attempting to find ways of formulating laws governing human processes acting on the environment Numerous national and international programs regarding biosphere and climate studies contribute to the quest for means of resolving the conflict between human society and nature However attempts to find efficient methods of regulating human activity on a global scale encounter principal difficulties The major difficulty is the lack of an adequate knowledge base pertaining to climatic and biospheric processes as well as the largely incomplete state of the databases concerning global processes occurring in the atmosphere in the ocean and on land Another difficulty is the inability of modern science to formulate the requirements which must be met by the global databases necessary for reliable evaluation of the state of the environment and forecasting its development for sufficiently long time intervals **Geomorphology and Global Environmental Change** Olav Slaymaker, Tom Spencer, Christine Embleton-Hamann, 2009-07-02 A statement from the world's leading geomorphologists on the state of and potential changes to the environment Changing River Channels A. Crate, Mark Nuttall, 2016-03-31 The first edition of *Anthropology and Climate Change* 2009 pioneered the study of climate change through the lens of anthropology covering the relation between human cultures and the environment from prehistoric times to the present This second heavily revised edition brings the material on this rapidly changing field completely up to date with major scholars from around the world mapping out trajectories of research and issuing specific calls for action The new edition introduces new foundational chapters laying out what anthropologists know about climate change today new theoretical and practical perspectives insights gleaned from sociology and international efforts to study and curb climate change making the volume a perfect introductory textbook presents a series of case studies both new case studies and old ones updated and viewed with fresh eyes with the specific purpose of assessing climate trends provides a close look at how climate change is affecting livelihoods especially in the context of economic globalization and the migration of youth from rural to urban areas expands coverage to England the Amazon the Marshall Islands Tanzania and Ethiopia re examines the conclusions and recommendations of the first volume refining our knowledge of what we do and do not know about climate change and what we can do to adapt Climate Change and International Politics Narottam Gaan, 2008 Accustomed to understanding security primarily a matter spatial exercise in distancing and boundary making on the part of states and their military alliances to secure borders and institutions from outside threats the nations of the world have so far given a short shrift to the gravity of environmental degradation as a factor or catalyst of intrastate or interstate conflict or at worst a security threat to entire humanity until the shafts of retaliatory responses of the infuriated climate change to the cloddish and brutish power of the rich industrialized nations to destroy it by its emission of carbon dioxide and other greenhouse gases pointed toward man menacing with funereal and cascading consequences of global warming Thus climate change which has so far been on the fringe of human concern or in American President s view a myth or a hoax has catapulted into the center stage of great political flare up among the nations of the world on the issue of apportioning the responsibility on rich industrialized nations or the populous South to mitigate the dangers of climate change which seems to be mired in the contradiction between North s advocacy of inequity in having uncontested access to the atmosphere as carbon sinks and equity while disabusing the atmosphere of the carbon debris Not walking on trodden furrows this book

expatiates on the desideratum of a paradigm shift from faith in the Newtonian mechanistic view of the universe to a faith in the profundity of Eastern wisdom and new insights presently found in science which see both nature and human beings as warp and woof woven beautifully into the divine tapestry
