The Changing Geography of Advanced Producer Services P. W. Daniels, Frank Moulaert, 1991 The service sector is the fastest growing but least studied area of modern economic geography so many economic geographers are now turning their attention to how the so called tertiary economy operates to produce distinctive patterns of location and regional development Producer services are those provided to enterprises rather than to individual consumers and this book is the first to be devoted specifically to assessing their role as spatial phenomena and agents of economic and geographical change Daniels and Moulaert approach the topic at two levels firstly theoretical where conventional neoclassical models of production and exchange seem to have little value in explaining service production and therefore new theoretical perspectives need to be developed and secondly empirical which presents regional development histories of producer services such as accountancy consultancy or finance to illustrate the complexity of the geographical dimensions of the modern service company This is a landmark book for students and researchers in geography economics planning and public policy

The Changing Economic Geography of Globalization Giovanna Vertova, 2006-04-20 The process of globalization has had profound often destabilizing effects on space at all levels i e local regional national international This revealing book analyzes both theoretically and empirically the effects of globalization over space It considers through a dialogue among different paradigms the ways in which space has become more important in the global economy Globalization has been advocated as a way of shrinking time and space which will lead to a homogenized global market a suggestion challenged in differing ways and with a variety of approaches by all the contributors to this volume Leading authorities from a range of disciplines are represented amongst this impressive list of contributors including Eric

Coffey,James John McRae,1989 This document presents a broad empirical picture of the national regional and urban structure of the Canadian economy It identifies the factors which may be causing the relative shift towards employment in service industries and occupations and shows that the lack of actual data on interregional flows of service outputs effectively precludes the empirical testing of regional general equilibrium models involving service industries It concludes by bringing forth the regional policy implications embedded in the conceptual and empirical work on service industries *Service Industries and Asia Pacific Cities* Peter W. Daniels,Kong Chong Ho,Tom Hutton,2005-04-01 During the second half of the twentieth century development in the Asia Pacific region has been dominated by industrialization However at the beginning of the twenty first century services in particular finance information and creative services have become deeply embedded in the processes of urban growth In Asia Pacific the rise of service industries has lead to national modernization programmes and globalization strategies Services are also driving change in the internal form of city regions and are being actively deployed as instruments of metropolitan reconfiguration and land use changes These changes have created problems such as social polarization and the displacement of traditional industries and residential districts Also there are tensions between local and global processes

in the development of service industries and between the imperatives of competitive advantage and sustainable development Service Industries and Asia Pacific Cities brings together a multi disciplinary team of experts to explore and illustrate the theoretical conceptual and practical issues arising from the transformation of Asia Pacific cities by service industries

From Combines to Computers Amy Glasmeier, Marie Howland, 1995-01-01 Through an analysis of national data and detailed case studies *From Combines to Computers* examines how the transition to a service economy is playing out for rural America It answers two important questions Will services fill the gap left by lost farming manufacturing and mining jobs And will services stabilize even revitalize rural areas Glasmeier and Howland document the intraregional spatial patterns and trends of services in the national economy compare services in urban and rural communities and identify the potential and limitations of rural development strategies based on services In particular they document the growing dominance of branch plants the displacement of mom and pop enterprises and the declining access to services for residents in the least populated

rural areas The authors conclude that services are unlikely to be the basis of widespread sustainable development unless policies are designed to help firms and communities compete successfully in an increasingly global and information based economy *Services and Economic Development in the Asia-Pacific* J.W. Harrington,2016-04-01 Until the 1990s industrialization was the dominant development paradigm for the Asia Pacific region Since then advanced services finance business or producer services information and creative services have become deeply embedded in the processes of economic growth and change in the region This rapid tertiary expansion is fundamentally restructuring national and regional economies and urban form in line with the introduction of advanced production systems national modernization programmes and the globalization strategies of governments Services are being actively deployed as instruments of metropolitan reconfiguration and land use change This book explores various aspects of the relationship between service industries and economic development in Japan South Korea China Taiwan Singapore India Australia and New Zealand It provides new sector oriented and regional and national perspectives on services and development **Industries in Europe** P. International Capitalism and Industrial Restructuring Richard Peet,2024-09-30 First published in 1987 *International Capitalism and Industrial Restructuring* counters the idea that industrial restructuring is a relatively problem free stage in the evolution to a post industrial society The editor argues that the permanent loss of eight million manufacturing jobs in the advanced industrial countries over the past ten years has had extremely serious effects on people economies and societies and that it is a major cause of economic recession The six million jobs gained in the newly industrializing countries pay low wages expose workers to hazards destroy local cultures and fail in generating integrated development for the Third World Many outstanding articles are included drawn from a wide variety of radical journals with introductions that set the scene and pose challenging questions All students and researchers concerned with industrial restructuring in the capitalist world will find the book valuable as a radical critique of widespread current economic problems
