Challenge Of War Britains Scientific And Engineering Contributions To World War Two:

The Challenge of War Guy Hartcup,1970 *The Era of World War II* Louise A. Arnold-Friend,1979 **Britain's War Machine** David Edgerton,2011-09-09 The familiar image of the British in the Second World War is that of the plucky underdog taking on German might David Edgerton s bold compelling new history shows the conflict in a new light with Britain as a very wealthy country formidable in arms ruthless in pursuit of its interests and in command of a global production system Rather than belittled by a Nazi behemoth Britain arguably had the world s most advanced mechanized forces It had not only a great empire but allies large and small Edgerton shows that Britain fought on many fronts and its many home fronts kept it exceptionally well supplied with weapons food and oil allowing it to mobilize to an extraordinary extent It created and deployed a vast empire of machines from the humble tramp steamer to the battleship from the rifle to the tank made in colossal factories the world over Scientists and engineers invented new weapons encouraged by a government and prime minister enthusiastic about the latest technologies The British indeed Churchillian vision of war and modernity was challenged by repeated defeat at the hands of less well equipped enemies Yet the end result was a vindication of this vision Like the United States a powerful Britain won a cheap victory while others paid a great price Putting resources machines and experts at the heart of a global rather than merely imperial story Britain s War Machine demolishes timeworn myths about wartime Britain and gives us a groundbreaking and often unsettling picture of a great power in action *The Challenge of War* Guy Hartcup,1970 Cultures, Communities, and Conflict Euthalia Lisa Panayotidis,Paul James Stortz,2012-01-01 Contributing to the social intellectual and academic history of universities the collection provides rich approaches to integral issues at the intersection of higher education and wartime including academic freedom gender peace and activism on campus and the challenges of ethnic diversity The contributors place the historical university in several contexts not the least of which is the university s substantial power to construct and transform intellectual discourse and promote efforts for change both on and off campus *The History of Imperial College London, 1907-2007* Hannah Gay,2007 This is the first major history of Imperial College London The book tells the story of a new type of institution that came into being in 1907 with the federation of three older colleges Imperial College was founded by the state for advanced university level training in science and technology and for the promotion of research in support of industry throughout the British Empire True to its name the college built a wide number of Imperial links and was an outward looking institution from the start Today in the post colonial world it retains its outward looking stance both in its many international research connections and with staff and students from around the world Connections to industry and the state remain important The College is one of BritainOCOs premier research and teaching institutions including now medicine alongside science and engineering This book is an in depth study of Imperial College it covers both governance and academic activity within the larger context of political economic and socio cultural life in twentieth century Britain History Of Imperial College

London, 1907-2007, The: Higher Education And Research In Science, Technology And Medicine Hannah Gay, 2007-02-14 This is the first major history of Imperial College London The book tells the story of a new type of institution that came into being in 1907 with the federation of three older colleges Imperial College was founded by the state for advanced university level training in science and technology and for the promotion of research in support of industry throughout the British Empire True to its name the college built a wide number of Imperial links and was an outward looking institution from the start Today in the post colonial world it retains its outward looking stance both in its many international research connections and with staff and students from around the world Connections to industry and the state remain important The College is one of Britain's premier research and teaching institutions including now medicine alongside science and engineering This book is an in depth study of Imperial College it covers both governance and academic activity within the larger context of political economic and socio cultural life in twentieth century Britain a **War and Economic Development** David

Joslin, 1975-04-10 This book of essays is a collective treatment of the problem of the impact of war on economic development in Europe This subject has been neglected despite the fact that the issues it raises are of direct concern to students of military history the history of science and technology the history of education historical demography as well as to students of political social and economic history The contributors to this volume have drawn on work done in all these fields Taken together this study provides the foundation for further comparative work on the effect of war and warfare on economic life The contributors have approached the problem from two sides The subject of a number of essays is the internal history of armed conflict These focus on war itself and discuss the mobilization of resources which precedes it and the ways that economic activity and policy are altered by it **National Military Establishments and the Advancement of Science and Technology** P. Forman, José M. Sánchez-Ron, 2001-11-30 To some philosophers seeking to understand the human condition technology is a necessary guide But to think through the complex human phenomenon of technology we must tackle philosophy of science philosophy of culture moral issues comparative civilizational studies and the economics of specific industrial and military technologies in their historical contexts The philosopher wants to grasp the technological factor in this troubled world even as we see it is only one factor and that it does not speak openly for itself Put directly our human troubles to a considerable extent have been transformed exaggerated distorted even degraded perhaps transcended by what engineers and scientists entrepreneurs and politicians have wrought But our problems are ancient problems of dominations struggles survival values in conflict greed and insane sadisms To get some conceptual light on the social reality which seems immediately to be so complicated a philosopher will need to learn from the historians of technology A few years ago the philosopher Elisabeth Straker concluded that a historical philosophy of technology is required since history and history alone provides all those concepts that form part of the repertoire of the philosophical analysis of technology And she added that this goes far beyond the triviality that like other cultural achievements technology has its historical development

Now historical comprehension is no substitute for a logical methodology in the analysis of technological problems *The Science of War* Donald Avery,1998-01-01 The Second World War with its emphasis on innovative weapons and defence technology brought about massive changes in the role of scientists in Canada the United States and Great Britain Canadian scientists working through the auspices of the National Research Council and the Department of National Defence made important contributions to the development of alliance warfare Before 1939 Canada had only a minute military establishment and a limited industrial and academic capacity for research and development With the outbreak of war all this changed dramatically This book explains how and why Canada was able to play in the big leagues of military technology including the development of radar RDX explosives proximity fuses chemical and biological warfare and the atomic bomb It also investigates the evolution of the Canadian national security state which attempted to protect defence secrets both from the Axis powers and from Canada s wartime ally the Soviet Union The Science of War provides both a cross disciplinary overview of the scientific and military activity of this period in several countries and a fascinating analysis of what the author calls Big Science in Canada *Operational Research In War And Peace: The British Experience From The 1930s To 1970* Maurice W Kirby,2003-06-18 This is the first of two projected volumes on the history of operational research OR in Britain commissioned by the UK Operational Research Society Based upon a vast array of published and unpublished sources the book provides an original account of the discipline s pre war and wartime origins This serves as a prelude to a wide ranging analysis of the diffusion of OR into the public and private sectors after 1945 The chapters on the role of OR in iron and steel and coalmining and its rapid adoption in the UK corporate sector after 1960 will be of particular interest to practitioners The book also analyses and explains the diffusion of OR into local and central government and provides an informed commentary on the origins and subsequent history of the OR Society Professor Kirby has related the development of OR in the UK to contemporary developments in the USA The book concludes with a resume of the post 1970 debates concerning the future trajectory of OR *Churchill's American Arsenal* Larrie D. Ferreiro,2022-09-14 Churchill s American Arsenal describes in depth how WWII became the War of Factories telling the heroic narratives of the Anglo American inventions and their inventors who helped decide the outcome of the conflict *Special Bibliographic Series* US Army Military History Research Collection,1978 *Special Bibliography* ,1977 *Pathogens for War* Donald H. Avery,2013-04-28 Pathogens for War explores how Canada and its allies have attempted to deal with the threat of germ warfare one of the most fearful weapons of mass destruction since the Second World War In addressing this subject distinguished historian Donald Avery investigates the relationship between bioweapons poison gas and nuclear devices as well as the connection between bioattacks and natural disease pandemics Avery emphasizes the crucially important activities of Canadian biodefence scientists beginning with Nobel Laureate Frederick Banting at both the national level and through cooperative projects within the framework of an elaborate alliance system Delving into history through a rich collection of declassified documents Pathogens for War also

devotes several chapters to the contemporary challenges of bioterrorism and disease pandemics from both national and international perspectives As such readers will not only learn about Canada s secret involvement with biological warfare but will also gain new insights into current debates about the peril of bioweapons one of today s greatest threats to world peace

The Effect of Science on the Second World War G. Hartcup,B. Lovell,2016-01-08 The latest advances in science were fully exploited in the Second World War They included radar sonar improved radio methods of reducing disease primitive computers the new science of operational research and finally the atomic bomb necessarily developed like all wartime technology in a remarkably short time Such progress would have been impossible without the cooperation of Allied scientists with the military The Axis powers failure to recognise this was a major factor in their defeat *Science and the Pacific War* Roy M. MacLeod,1999-12-31 In 1995 the fiftieth anniversary of the end of the Second World War occasioned many reflections on the place of science and technology in the conflict That the war ended with Allied victory in the Pacific theatre inevitably focussed attention upon the Pacific region and particularly upon the Manhattan project and its outcome It was in the Pacific that Western physics and engineering gave birth to the Atomic Age However the Pacific war had also proved a testing time and a testing space for other disciplines and institutions Extreme environments and operational distances and the fundamental demands of logistics required the Allies and the Japanese to innovate many scientific and technological practices Just as medicine and botany were called upon to fight tropical diseases and insect pests so engineers anthropologists and geographers were called upon to understand local conditions and climates and to work with local peoples whose traditional lives were changed forever by the experience At the same time the war played midwife to a host of new developments not least in scientific intelligence and in chemical and biological weapons which were to acquire far greater importance after 1945 Special Bibliography Series ,1957 *Science, Technology, and Public Policy: Books, monographs, documents, and articles in journals, 1968 through 1970* Lynton Keith Caldwell,William B. DeVille,Hedvah L. Shuchman,1968 *The Military and Society* United States Air Force Academy. Library,Betsy C. Kysely,Betty Fogler,1972
