McDonald, David A. Bolliet, John E. Hayes, 2016-03-21

Chemesthesis are the chemically initiated sensations that occur via the touch system Examples in the mouth include the burn of capsaicinoids in chilies the cooling of menthol in peppermint and the tingle of carbonation It is physiologically distinct from taste and smell but is increasingly understood to be just as important as these senses for their contribution to flavor especially with the sustained growth in interest in spicy foods from around the world Chemesthesis Chemical Touch in Food and Eating surveys the modern body of work on chemesthesis with a variety of contributors who are well known for their expertise on the topic After a forward by John Prescott and an introduction by Barry Green who originally coined the term chemesthesis 25 years ago the book moves on to survey chemesthetic spices and address the psychology and physiology of chemesthesis practical sensory and instrumental analysis the interaction of chemesthesis with other chemical senses health ramifications and the application of chemesthesis in food The major types of chemesthesis including pungency burning cooling tingling nasal irritation and numbing are each covered in their own chapter The book concludes with a look to the future This is the first comprehensive book on chemesthesis since 1990 when Barry Green and his colleagues edited a volume on the perception of chemical irritants including those in food This new book is intended to be a vital resource for anyone interested in the sensory impact of the food we eat including food scientists sensory professionals analytical chemists

appreciation for this crucial sense **Bioinspired solutions to the challenges of chemical sensing** Ramon Huerta, Thomas Nowotny, Chemical sensing is likely the most primordial sensory modality that emerged in the evolution of life Without chemical sensing life on earth would probably not exist It is used for detecting nutrients avoiding threats finding mating partners and various forms of communication and social interaction between animals The advent of artificial sensors has created a myriad of problems in the areas of chemical detection and identification with applications in food quality and pollution control chemical threat detection health monitoring robot control and even odor and taste synthesis Efficient algorithms are needed to address the many challenges of chemical sensing in these areas including but not limited to sensitivity levels sensor drift concentration invariance of analyte identity and complex mixtures Defining and improving analysis methods for artificial chemical sensing remains an active research area in engineering and machine learning alike In the course of evolution animals bacteria and plants have developed sophisticated methods and algorithms for solving difficult problems in chemical sensing very efficiently Complex signalling pathways inside single cells can trigger movement toward the source of a nutrient Complex networks of neurons appear to be able to compute odor types and the distance to a source in turbulent flows These networks of neurons use a combination of temporal coding layered structures simple Hebbian learning rules reinforcement learning and inhibition to quickly learn about chemical stimuli that are critical for their survival Olfaction is a vibrant field of research because recent technological advances allow monitoring and manipulating brain areas inaccessible in the past thus allowing for rapid progress This is particularly relevant because to this date the best solutions to many general chemical sensing problems are still found in animals rather than artificial devices Many lessons may yet have to be learned from biological systems to solve the complex problems of chemical sensing with similar success as animals routinely do This special issue has the ambitious goal of bringing together biologists and engineers to report on biological solutions and engineering approaches to chemical sensing challenges in order to better understand in what aspects both fields can find common ground of discussion and to thus promote novel areas of interdisciplinary research

Environmental Challenges Shimson Belkin, 2012-12-06 In the summer of 1999 an international group of experts convened in Jerusalem Israel in order to define the major environmental challenges facing humanity at the dawn of the new millennium and where possible propose ways of addressing them Almost 50 selected articles are collected in the present book which constitutes a striking interdisciplinary combination of state of the art science with the latest views on environmental law education and international cooperation Whilst a major fraction of the book is devoted to water related issues water quality monitoring water and wastewater treatment water based international cooperation and more other sections deal with timely topics relating to air pollution biodiversity conservation and education The book is intended for environmental scientists professionals and students of all disciplines Handbook of dietary and nutritional aspects of human breast milk Sherma Zibadi, Ronald Ross Watson, Victor R. Preedy, 2023-08-07 Breast feeding has a great impact on the

growth of infants both physically and psychologically Human breast milk is beneficial to infant health because it contains the necessary macro and micro nutrients for tissue accretion repair and behavioural developments The production of milk is a complex biological process and its composition and volume is dependent upon a variety of factors such as the health and dietary status of the mother Moreover it is influenced by the different stages and duration of breast feeding Environmental factors both global and local may also alter lactation milk composition and nutritional value This handbook provides a unique and complete insight into the dietary and nutritional aspects of human breast milk For a general understanding an overview is given of breast structure and function and lactation Nutritional aspects are highlighted in a section on the composition of breast milk including recent research results on breast milk and growth factors vitamins proteins and antigens amongst others Finally an analysis of both the beneficial and adverse factors relating to lactation and composition of breast milk are discussed Journal American Chemical Society,2004
