Captain Scott: Icy Deceits and Untold Realities Krzysztof Sienicki, 2016-11-01 This expertly written book is nothing less than a daring challenge to the prevailing views of Captain Robert F Scott's journey to the South Pole and consequent disaster. Borrowing from various scientific disciplines Krzysztof Sienicki lucidly argues against each of the presumed causes of Captain Scott and his companions' deaths. In particular he demolishes the notions of extreme low temperatures, ferocious winds and food/fuel shortages as the main causes of the disaster. Using neural network computer simulations he proves that the Extreme Cold Snap, Never Ending Gale and food/fuel scarcity never occurred. By eliminating the alleged causes of the disaster the author provides data and arguments that the deaths of Scott, Wilson and Bowers were a matter of choice rather than fate. The choice was made long before there was an actual end of food/fuel and long before the end of the physical strength needed to reach delusive salvation at One Ton Depot.

Science and Social Science Malcolm Williams, 2012-10-02 Is social science really a science at all and if so in what sense? This is the first question that any course on the philosophy of the social sciences must tackle. In this brief introduction Malcolm Williams gives students the grounding that will enable them to discuss the issues involved with confidence. He looks at the historical development of natural science and its distinctive methodology, the case in favour of an objective science of the social which follows the same rules. The arguments of social constructionists, interpretative sociologists and others against objectivity and even science itself, recent developments in natural science for instance the rise of complexity theory and the increased questioning of positivism which bring it closer to some of the key arguments of social science. Throughout the book is illustrated with short, clear examples taken from the actual practice of social science research and from popular works of natural science which will illuminate the debate for all students whatever their background.
