Change And Decay:

The Sustainability and Spread of Organizational Change David A. Buchanan, Louise Fitzgerald, Diane Ketley, 2006-12-05
This important book examines issues affecting the sustainability and spread of new working practices. The question of why good ideas do not spread, the best practices puzzle, has been widely recognized. But the improvement evaporation effect, where successful changes are discontinued, has attracted less attention. Keeping things the way they are has been seen as an organizational problem to be resolved, not a condition to be achieved. This is one of the first major studies of the sustainability of change, focusing on the example of the NHS by a unique team of health service and academic researchers. The findings may apply to a variety of other settings. The agenda set out in 2000 in The NHS Plan is perhaps the largest organization development programme ever undertaken in any sector anywhere. The NHS thus offers a valuable living laboratory for the study of change. This text shows that sustainability and spread are influenced by a range of issues: contextual, managerial, political, individual and temporal. Developing a processual perspective, this fresh analysis considers policy implications and strategies for managing sustainability and spread. This book will be essential reading for students, managers and researchers concerned with the effective implementation of organizational change.

The Road to Growth Bob Jackson, 2005 Shows how the Church at parish, diocesan and national level can overturn its old cycle of decline and begin a new cycle of growth, transforming fragile signs of hope for the Church into a solid road to growth.

Change Your Mind Devakinanda Vithal Pasupuleti, 2006 Change Your Mind is an inspirational educational book that brings awareness about one's inner self through logic to try to corner insights. For any problem one faces, the solutions are found with knowledge, which is the ultimate weapon for survival. Change Your Mind is the key to develop a simple and clear mind, the ultimate source of happiness.

Preservation of Cultural Heritage and Resources Threatened by Climate Change Chiara Bertolin, 2019-08-13 With its wide spectrum of data, case studies, monitoring and experimental and numerical simulation techniques, the multidisciplinary approach of material, environmental and computer science applied to the conservation of cultural heritage offers several opportunities for the heritage science and conservation community to map and monitor state-of-the-art knowledge on natural and human-induced climate change impacts on cultural heritage, mainly constituted by the built environment in Europe and Latin America. Geosciences Special Issue titled Preservation of Cultural Heritage and Resources Threatened by Climate Change was launched to take stock of the existing but still fragmentary knowledge on this challenge and to enable the community to respond to the implementation of the Paris agreement. These 10 papers exploit a broad range of data derived from preventive conservation monitoring conducted indoors in museums, churches, historical buildings or outdoors in archaeological sites and city centers. Case studies presented in the papers focus on a well-assorted sample of decay phenomena occurring on heritage materials, e.g. surface recession and biomass accumulation on limestone, depositions of pollutant on marble, salt weathering on inorganic building materials and weathering processes on mortars in many local to

Identity of Cities and City of Identities Ali Cheshmehzangi, 2020-04-21 This book explores the hybridity of urban identities in multiple dimensions

and at multiple scales how they form as catalysts and mechanisms for urban transitions and how they develop as city branding strategies and urban regeneration methods Due to rapid globalisation the notion of identity has become scarcer more fragile and inarguably more important Given the significance of place and displacement for contemporary everyday life and the continuous advancement of technologies identifying relations and values that define humans and their environments in various ways has become crucial Divided into seven chapters this book provides extensive coverage of urban identity an often overlooked topic in the fields of urbanism urban geography and urban design It approaches the topic from a novel dual perspective by exploring cities with tangible commonalities and shared strategies for refining their identities and by highlighting cities and urban environments characterised by multiple identities Based on a decade of research in this field the book provides a multi disciplinary perspective on urban identity In addition to comprehensive information for students it offers a key reference guide for urbanists urban designers and geographers architectural and urban practitioners decision makers and governing bodies involved in urban development strategies

Abusing Science Philip Kitcher,1983-06-23

Abusing Science is a manual for intellectual self defense the most complete available for presenting the case against Creationist pseudo science It is also a lucid exposition of the nature and methods of genuine science The book begins with a concise introduction to evolutionary theory for non scientists and closes with a rebuttal of the charge that this theory undermines religious and moral values It will astonish many readers that this case must still be made in the 1980s but since it must Philip Kitcher makes it irresistibly and forcefully Not long ago a federal court struck down an Arkansas law requiring that scientific Creationism be taught in high school science classes Contemporary Creationists may have lost one legal battle but their cause continues to thrive Their efforts are directed not only at state legislatures but at local school boards and textbook publishers As Kitcher argues in this rigorous but highly readable book the integrity of science is under attack The methods of inquiry used in evolutionary biology are those which are used throughout the sciences Moreover modern biology is intertwined with other fields of science physics chemistry astronomy and geology Creationists hope to persuade the public that education in science should be torn apart to make room for a literal reading of Genesis Abusing Science refutes the popular complaint that the scientific establishment is dogmatic and intolerant denying academic freedom to the unorthodox It examines Creationist claims seriously and systematically one by one showing clearly just why they are at best misguided at worst ludicrous
