Orofacial Functions: From Neural Mechanisms to Rehabilitation Teresa Lever, Limor Avivi-Arber, Kazutaka Takahashi, 2022-09-23 *Watching English Change* Laurie Bauer, 2014-06-03 Examines the ways language has changed in the twentieth century It concentrates on standard English and takes a historical rather than sociolinguistic view of the changes which have occurred **(M)Other Tongues** Juliane Prade, 2020-05-15 *M Other Tongues Literary Reflexions on a Difficult Distinction* examines a key problem of literary criticism the differentiation between languages is at the same time necessary and impossible It is indispensable in order to read a text yet literary texts are precisely those that question this distinction articulating the link between languages and cultures as well as the inherent strangeness of even one's own mother tongue *M Other Tongues* explores texts from the 16th century to the 21st century focusing on different aspects of one main feature of literary texts formally as well as semantically they transcend the rules and conventions of the language they speak Crossing cultural borders is commonly discussed in historical social linguistic and psychoanalytical terms whether it be as post colonialism exilic or diasporic identities creoles or the displaced other within the own *M Other Tongues* argues that rather than being mere evidence in the theoretical analysis of cultural transitions literary texts are a unique medium to reflect such processes as they challenge and modify the notion of language itself The book discusses texts written mainly in English French and German but also in Spanish and the complex formerly known as Yugoslavian *M Other Tongues* shows that such distinctions between languages are precise since they can be exemplified with an indefinite number of words and rules and still remain uncertain because they cannot be abstracted from these examples What separates the mother tongue from other tongues is indeed precise uncertainty **Climate Change, Glacier Response, and Vegetation Dynamics in the Himalaya** RB Singh, Udo Schickhoff, Suraj Mal, 2016-06-06 This book provides information essential for anyone interested in climate and environmental change of the Himalayan region including land and resource managers environmental planners conservationists environmentalists geographers climatologists ecologists and students The book is unique in its coverage of the current understanding of the science of climate change in the Himalayan mountain system and of the major impacts on physical systems and ecosystems The book gives an overview of the physical science basis of climate change and explains drivers and processes of glacier and vegetation dynamics The book covers relevant aspects of accelerated climate change observed in the Himalayan mountain system and highlights the regional differentiation of climatic changes and associated environmental modifications The focus is on climate variability and change and how physical systems and ecosystems respond to climate change impacts Consequences include impacts on physical systems such as glacier shrinkage glacial lake outburst floods altered hydrological characteristics permafrost warming and thawing and mass movements on slopes Climate change is also a powerful stressor on ecosystems and induces range shifts of plant and animal species and alterations in terms of phenology biomass plant cover plant group dominance and species composition Thus ecosystem structure and

functioning will be strongly affected The book has an introductory chapter followed by a section on climate change a section on impacts on glaciers and hydrology and a section on vegetation dynamics Each section has several chapters presenting key concepts major drivers and key processes of environmental change in the Himalayan region from different perspectives Climate change impacts in the Himalaya have not been studied in much detail and respective findings were not presented so far in a comprehensive overview This book summarizes the current knowledge of interactions between climate change and the dynamics of glaciers hydrology and vegetation
