Changes In Sensory Motor Behavior In Aging:

Changes in Sensory Motor Behavior in Aging A.-M. Ferrandez,N. Teasdale,1995-12-11 Recently studies on aging processes and age related changes in behavior have been expanding considerably probably due to the dramatic changes observed in the demographics This increase in the overall age and proportion of elderly people has heightened the severity of problems associated with the safety and well being of elderly persons in everyday life Many researchers working on motor control have thus focused more intensely on the effects of age on motor control This new avenue of research has led to programs for alleviating or delaying the specific sensory motor limitations encountered by the elderly e g falls in an attempt to make the elderly more autonomous The aggregation of studies from different perspectives is often fascinating especially when the same field can serve as a common ground between researchers Nearly all contributors to this book work on sensory motor aging they represent a large range of affiliations and backgrounds including psychology neurobiology cognitive sciences kinesiology neuropsychology neuropharmacology motor performance physical therapy exercise science and human development Addressing age related behavioral changes can also furnish some crucial reflections in the debate about motor coordination aging is the product of both maturational and environmental processes and studies on aging must determine how the intricate interrelationships between these processes evolve The study of aging makes it possible to determine how compensatory mechanisms operating on different subsystems and each aging at its own rate compensate for biological degenerations and changing external demands This volume will contribute to demonstrating that the study of the aging process raises important theoretical questions *Cognitive Limitations in Aging and Psychopathology* Randall W.

Engle,Grzegorz Sedek,Ulrich von Hecker,Daniel N. McIntosh,2005-10-17 This book examines the major progress made in recent psychological science in understanding the cognitive control of thought emotion and behavior and what happens when that control is diminished as a result of aging depression developmental disabilities or psychopathology Each chapter of this volume reports the most recent research by a leading researcher on the international stage Topics include the effects on thought emotion and behavior by limitations in working memory cognitive control attention inhibition and reasoning processes Other chapters review standard and emerging research paradigms and new findings on limitations in cognitive functioning associated with aging and psychopathology The explicit goal behind this volume was to facilitate cross area research and training by familiarizing researchers with paradigms and findings in areas different from but related to their own

From Brain to Body: The Impact of Nervous System Declines on Muscle Performance in Aging Brian C. Clark, Timothy D. Law Sr., S. Lee Hong, 2015-12-18 Download PDF Download EPUB

The deterioration of skeletal muscle performance e g declines in muscle strength and motor performance with advancing age has long been anecdotally recognized as Shakespeare pointed out nearly a half millennium ago in his monologue The Seven Ages of Man and has been of scientific interest for well over a century Over the past several decades the scientific and medical communities have recognized that reduced skeletal muscle performance is a debilitating and life threatening condition in the elderly For example the age associated loss of muscle strength as well as impairment in the ability to finely control movement is highly associated with physical disability and difficulty performing activities of daily living While the nervous system is widely recognized for its role in controlling skeletal muscle during motor function its role in determining the performance characteristics of aged skeletal muscle has largely been understudied Historically it was believed that these reductions in muscle performance were primarily resultant of age associated adaptations in skeletal muscle e g muscle atrophy However aging is associated with widespread qualitative and quantitative changes in both the central and peripheral nervous systems that are likely to influence numerous aspects of muscle performance such as muscle strength fatigue and motor control as well as mobility In this research topic we sought to examine a broad range of issues surrounding

- 1 the age related changes in nervous system anatomical physiological and biochemical changes in the central and or peripheral nervous systems
- 2 the functional role of these nervous system changes in contributing to altered skeletal muscle performance and or mobility and
- 3 physical and pharmacologic interventions that act via the nervous system to enhance muscle performance and or mobility

Researchers and academicians engaged in aging neuroscience and or applied physiology research focused within the scope of this research topic were encouraged to contribute an original research article review article clinical case study hypothesis and theory article method article opinion article or technology report to this research topic Herein we present a series of outstanding articles within this scope of work including a last minute addition article from Wiesmeier Dalin and Maurer that is not mentioned in the editorial that we hope will help to vertically advance the intersecting fields of aging geriatrics and neuroscience Lastly as the editors we wish to thank all article contributors and peer reviewers for their efforts in contributing to this Research Topic journal issue book Additionally we would like to thank people everywhere who volunteer their time and body for human subjects research studies such that are presented herein It is the wonderful individuals who are willing to participate in experiments that make scientific exploration and health and medical advancements possible

The Contribution of Postural Adjustments to Body Balance and Motor Performance Eric Yiou, Alain Hamaoui, Gilles Allali, 2019-02-08 The control of balance by the central nervous system is crucial to maintain our posture and perform efficiently our daily motor tasks This control requires the development of

dynamical phenomena sub served by highly coordinated patterns of muscle activation deactivation disseminated throughout the whole body and called postural adjustments Establishing the interaction between balance control locomotion and cognition has important clinical implication especially in term of falls prevention and will improve our knowledge on the underlying neural correlates This Research Topic provides an up to date picture of the relationship between postural adjustments body balance and motor performance in healthy young and older adults and pathological participants It includes 36 contributions 1 editorial 28 original articles 4 reviews and 3 methods articles which are separated into four sections 1 Postural maintenance and multisensory integration 2 Anticipatory postural adjustments associated with voluntary movement 3 Postural adjustments associated with predictable and unpredictable external perturbation 4 Gait assessment and rehabilitation in aging Beside their basic interest of unveiling the mechanisms behind motor control results from the investigations of this topic are relevant to develop new methods or tools to improve postural stability and motor performance with applications in the fields of neurodegenerative conditions rehabilitation ergonomics and sports sciences

Technology for Adaptive Aging National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Steering Committee for the Workshop on Technology for Adaptive Aging, 2004-04-25 Emerging and currently available technologies offer great promise for helping older adults even those without serious disabilities to live healthy comfortable and productive lives What technologies offer the most potential benefit What challenges must be overcome what problems must be solved for this promise to be fulfilled How can federal agencies like the National Institute on Aging best use their resources to support the translation from laboratory findings to useful marketable products and services Technology for Adaptive Aging is the product of a workshop that brought together distinguished experts in aging research and in technology to discuss applications of technology to communication education and learning employment health living environments and transportation for older adults It includes all of the workshop papers and the report of the committee that organized the workshop The committee report synthesizes and evaluates the points made in the workshop papers and recommends priorities for federal support of translational research in technology for older adults Measurement Issues in Aging and Physical Activity Weimo Zhu, Wojtek J. Chodzko-Zajko, 2006 Based on the 10th Measurement and Evaluation Symposium Measurement Issues and Challenges in Aging Research Measurement Issues in Aging and Physical Activity considers research from experts around the world relating to the latest questions challenges and techniques in aging and measurement The reference addresses a range of topics in aging research including issues from the fields of kinesiology biology physiology technology urban planning measurement and statistics Measurement Issues in Aging and Physical Activity breaks new ground with a discussion of multicultural factors related to physical activity promotion and intervention Ideas include using culture as a catalyst for active living and using culture based physical activity as an alternative approach to promotion of active living The reference further examines multicultural issues with a look at

alternative medicine including an account of a demonstration of qi gong a traditional Chinese exercise from the symposium In addition a new term kinesmetrics is introduced for the field of measurement and evaluation Kinesmetrics is defined as a discipline for developing and applying measurement theory statistics and mathematical analysis to the field of kinesiology The groundbreaking Measurement Issues in Aging and Physical Activity explores subjects in a range of research topics For both veterans and newcomers to the field this reference will be a comprehensive guide to the latest research on aging in measurement and physical activity Publisher description [Transportation and Aging; Selected Issues](#) Edmund J.

Principles and Practice of Geriatric Surgery Ronnie Ann Rosenthal, Michael E. Zenilman, Mark R. Katlic, 2013-06-29 More than two decades ago in response to the special healthcare needs of the aging American population interest in the field of geriatric medicine began to grow and blossom in the United States In 1984 and 1985 under the editorial leadership of Christine K Cassel and William R Hazzard respectively two major textbooks devoted to the medical care of aged patients were published These scholarly comprehensive texts provided insight into the principles of aging and guidance in the care of the geriatric patient Three editions later the need to understand the special issues involved in the medical care of the elderly is widely accepted by internists primary care providers and medical specialists For the editors of this book the special issues involved in the surgical care of the elderly have been apparent for nearly as long Although there have been a few scholarly texts on the subject including one in 1990 by Mark R Katlic general acceptance of the concept of geriatric surgery by our surgical and medical colleagues has however lagged This is not the result of a proportionately smaller number of older patients with surgical disease because cancer cardiovascular disease and orthopedic problems are diseases of the aged It is rather the result of uncertainty about the value of surgery in the elderly and concerns about the risks of operations In the past such concerns prevented primary care givers from referring patients for surgical care and prevented surgeons from agreeing to operate
