Climate Change and Globalization in the Arctic E. Carina H. Keskitalo, 2012-05-04 Climate change vulnerability assessment is a rapidly developing field However despite the fact that such major trends as globalization and the changing characteristics of the political and economic governance systems are crucial in shaping a community's capacity to adapt to climate change these trends are seldom included in assessments This book addresses this shortcoming by developing a framework for qualitative vulnerability assessment in multiple impact studies of climate change and globalization and applying this framework to several cases of renewable natural resource use The book draws upon case studies of forestry and fishing two of the largest sectors that rely on renewable natural resources and reindeer herding in the European North The study represents a bottom up view originating with the stakeholders themselves of the degree to which stakeholders find adaptation to climate change possible and how they evaluate it in relation to their other concerns notably economic and political ones Moreover the approach and research results include features that could be broadly generalized to other geographic areas or sectors characterized by renewable natural resource use

Forest Bioeconomy and Climate Change Lauri Hetemäki, Jyrki Kangas, Heli Peltola, 2022-08-17 This edited open access volume explores the role of forest bioeconomy in addressing climate change The authors put a particular focus on planetary boundaries and how the linear growth oriented economy is coupled with climate change and environmental degradation Biobased products and sustainable production paths have been developed but how can they be scaled in order to lead to an economic paradigm shift This and other questions are discussed throughout the volume Since science indicates that climate change will continue this century the authors also analyse how forests can be adapted to increasing forest disturbances that changing climate are expected to cause The authors propose climate smart forestry as useful approach for climate mitigation and adaptation of forests to climate change as well as sustainable increase of economic well being based on forestry The book illustrates the application of climate smart forestry in the Czech Republic Finland Germany and Spain i e in EU countries with quite different forests and forest sectors This proactive and inspiring volume is an essential resource for Forest Management professionals decision makers scientists and forestry students

Forest Resources Management in Indonesia (1968-2004) Herman Hidayat, 2016-02-18 This book explores the forestry sector and its context investigating the management of forest resources

in Indonesia It covers topics including forest fires deforestation water pollution depletion of biodiversity climate change and environmental damages The book adopts a political economy approach elaborating on the role of direct actors such as the central government private companies and local governments and the role of indirect actors In addition readers will discover anthropological and sociological perspectives through engagement with local communities such as the Kutai Banjar and Rejang ethnic groups Chinese trading communities NGOs and Academics Featuring interviews with 91 informants and participatory observations the text draws on secondary literature to provide a comprehensive overview of the subject This work is illustrated with figures tables and maps and will be of particular interest to students and researchers of forest policies It makes a valuable contribution to forest sciences and will also be useful to those in non government organizations politicians and business men with an interest in forest resources management or a deeper interest in Indonesia

Restoring Forests and Improving Livelihoods in Nepal Hemant Ojha,Krishna K. Shrestha,Naya S. Paudel,Rahul Karki,Dil Khatri,Sony Baral,Mani Ram Banjade,Ian Nuberg,2025-09-30 This book presents a comprehensive review of new research and practice based insights from Nepal s four decades of community forestry development delving into when and how community based management can lead to forest landscape restoration and equitable livelihoods With over four decades of formal program history Nepal s community forestry is a rare case from the Global South showcasing the trajectories and outcomes of a community based environmental management initiative It offers historically proven lessons of what it takes to restore degraded forests in a way that empowers local communities to make decisions The book showcases research and experiential insights of those who became part of Nepal s community forestry movement from the early years to the current stage Tracing stories of change from the era of Himalayan degradation in the 1970s to the globally hailed success of community forestry in the 2000s the book demonstrates how the policy political economy and changing community dynamics have shaped the everyday practice of community forestry and its contribution to livelihoods and forest restoration It reveals how small scale work in the early years evolved into a complex system of community forestry exposing the challenges associated with social exclusion resource management and policy environment As such it makes an important contribution to the global knowledge on community driven forest landscape restoration in the Global South where forest ecosystems are inseparable from the everyday life and livelihoods of local communities This book will be of great interest to students scholars and practitioners working on forest restoration and conservation community development environmental policy and planning and sustainable development more widely

Boreal Forests in the Face of Climate Change Miguel Montoro Girona,Hubert Morin,Sylvie Gauthier,Yves Bergeron,2023-03-01 This open access book explores a new conceptual framework for the sustainable management of the boreal forest in the face of climate change The boreal forest is the second largest terrestrial biome on Earth and covers a 14 million km² belt representing about 25% of the Earth s forest area Two thirds of this forest biome is managed and supplies 37% of global wood production These forests also provide a range of natural

resources and ecosystem services essential to humanity. However, climate change is altering species distributions, natural disturbance regimes, and forest ecosystem structure and functioning. Although sustainable management is the main goal across the boreal biome, a novel framework is required to adapt forest strategies and practices to climate change. This collaborative effort draws upon 148 authors in summarizing the sustainable management of these forests and detailing the most recent experimental and observational results collected from across the boreal biome. It presents the state of sustainable management in boreal forests and highlights the critical importance of this biome in a context of global change because of these forests' key role in a range of natural processes including carbon sequestration, nutrient cycling, and the maintaining of biodiversity. This book is an essential read for academics, students, and practitioners involved in boreal forest management. It outlines the challenges facing sustainable boreal forest management within the context of climate change and serves as a basis for establishing new research avenues, identifying future research trends, and developing climate-adapted forest management plans.

Handbook on Climate Change and Technology Frauke Urban, Johan Nordensvärd, 2023-12-11. This timely Handbook presents the latest knowledge on technological innovation for climate change mitigation and adaptation. Looking beyond technical fixes, it further draws on economics, politics, and sociology to explore how modern technology can contribute to effective and socially just sustainability transitions.

Political Change and Environmental Policymaking in Mexico Jordi Diez, 2013-10-31. This book explores environmental policymaking in Mexico as a vehicle to understanding the broader changes in the policy process within a system undergoing a democratic transformation. It constitutes the first major analysis of environmental policymaking in Mexico at the national level and examines the implementation of forestry policy in Mexico's largest rain forest, the Selva Lacandona of the state of Chiapas.

Co-benefits of Sustainable Forestry Kanehiro Kitayama, 2012-09-24. Tropical rain forests are increasingly expected to serve for climate change mitigation and biodiversity conservation amid global climate change and increasing human demands for land. Natural production forests that are legally designated to produce timber occur widely in the Southeast Asian tropics. Synergizing timber production, climate change mitigation, and biodiversity conservation in such tropical production forests is one of the most realistic means to resolve these contemporary global problems. Next-generation sustainable forest management is being practiced in the natural tropical rain forest of a model site in Sabah, Malaysian Borneo, while earlier sustainable management practices have generally failed, leading to extensive deforestation and forest degradation elsewhere in the tropics. Ecologists have examined co-benefits of sustainable forestry in the model forest in terms of forest regeneration, carbon sequestration, and biodiversity in comparison to a forest managed by destructive

conventional methods Taxonomic groups studied have included trees decomposers soil microbes insects and mammals A wide array of field methods and technology has been used including count plots sensor cameras and satellite remote sensing This book is a compilation of the results of those thorough ecological investigations and elucidates ecological processes of tropical rain forests after logging The book furnishes useful information for foresters and conservation NGOs and it also provides baseline information for biologists and ecologists A further aim is to examine the environmental effects of a forest certification scheme as the model forest has been certified by the Forest Stewardship Council Taken as a whole this book proves that the desired synergy is possible Climate Change and Environmental Politics Hasret Çomak,Burak Şakir

Economic Research Supporting Water Resource Stewardship in the Pacific Northwest Laurie L. Houston,2011 This is a print on demand edition of a hard to find publication Knowledge about the value of water to different users and methods with which to evaluate biophysical economic ecological and social tradeoffs associated with allocating limited water resources among competing uses is vital to devising appropriate and effective water resource policies Intended primarily for non economists this report reviews existing water resource economics literature as of 2002 concerning the economic value of water in different uses in the Pacific Northwest the evaluation of tradeoffs among uses and the use of economic incentives for water conservation and protection or enhancement of water quality Includes an annotated bibliography of water resource economics research *Governing Resources in a Changing Environment* Mangku Purnomo,2011 Until 1998 Indonesia was ruled by an authoritarian regime under which natural resources were exploited excessively so that resources governance was not appropriate anymore dealing with sustainability issue Throughout the contemporary reform process with the

decentralization of power via local and regional autonomy natural resources are no longer dominated by direct state power only but also managed by more actors at various levels of society To employ the concepts of political ecology new institutionalism livelihood strategy and social sustainability the research showed that spatial production of Upland Bromo have always been dominated by state actors in order to establish the control over land and people In the other hand the contemporary environmental changes socially and physically coincidentally lessen the availability and productivity of the resources which in turn has affected the local people s livelihoods leading to the increasing struggle for resources As a result three kinds of new local resources governance namely multi institutional relationship bilateral institutional relationship and personal relationship based resources governance are formed In association with the sustainability issue these new local resources governance was not really sustainable signalling by negative value in indicators analysed ability to develop sustainability bridge the sustainability and maintenance sustainability This research gives clear explanation that transformation of regime from authoritarian to democratic in developing countries do not always has significance impact in promoting sustainable resources governance
