Toskos,Alexia Toskos Dils,2011 How do we understand language What kinds of representations do people form when hearing a story or when reading a paragraph In this dissertation I will explore how people make meaning out of the language that they read or hear One possibility is that the words we read or hear engage perceptuomotor representations and language comprehension arises from modality specific simulation or imagery of the linguistic content Strong versions of the modality specific approach assume complete overlap between the representations generated by language and those generated by perception and action Perhaps representations brought about by language only partially overlap and interact with perception and action with clear limits and with important differences along the continuum from concrete to abstract language The studies presented in this dissertation aim to delineate where perception and language understanding share representations and processing resources and where they diverge The findings suggest that language understanding affects visuospatial processing Chapter 2 and visual motion processing Chapter 3 but to a lesser extent than does perception itself **Municipal Reports for the Fiscal Year** San Francisco (Calif.). The Fiscal Theory of the Price Level John H. Cochrane, 2023-01-17 A comprehensive account of how government deficits and debt drive inflation Where do inflation and deflation ultimately come from The fiscal theory of the price level offers a simple answer Prices adjust so that the real value of government debt equals the present value of taxes less spending Inflation breaks out when people don't expect the government to fully repay its debts The fiscal theory is well suited to today's economy Financial innovation undermines money demand and central banks don't control the money supply or aggressively change interest rates invalidating classic theories while large debts and deficits threaten inflation and constrain monetary policy This book presents a comprehensive account of this important theory from one of its leading developers and advocates John Cochrane aims to make fiscal theory useful as a conceptual framework and modeling tool and for analyzing history and policy He merges fiscal theory with standard models in which central banks set interest rates giving a novel account of monetary policy He generalizes the theory to explain data and make realistic predictions For example inflation decreases in recessions despite deficits because discount rates fall raising the value of debt specifying that governments promise to partially repay debt avoids classic puzzles and allows the theory to apply at all times not just during periods of high inflation Cochrane offers an extensive rethinking of monetary doctrines and institutions through the eyes of fiscal theory and analyzes the era of zero interest rates and post pandemic inflation Filled with research by Cochrane and others *The Fiscal Theory of the Price Level* offers important new insights about fiscal and monetary policy
