Cancer Targeted Drug Delivery You Han Bae, Randall J. Mersny, Kinam Park, 2013-08-31 This book was conceived from a simple question as to why cancer is so difficult to treat Ultimately we want to find ways to cure cancers but that may be an elusive dream at least with the technologies we have now and expect to have in the near future This leads the question of whether it is possible to improve current cancer treatment methods especially from the perspective of enhancing targeted drug delivery to tumors This volume is designed to provide information related to the difficulties in treating cancers through targeted drug delivery our current understanding of cancer biology and potential technologies that might be used to achieve enhanced drug delivery to tumors An ideal drug delivery system for treating cancers would maximize the therapeutic efficacy with minimal side effects in clinical applications The seemingly improved anticancer efficacy of the current nanoparticle based formulations needs to be viewed from the context of very poor success rates for translation to human applications The results of in vitro cell culture models and small animal in vivo experiments have not been extrapolated to clinical applications Finding the reasons for the lack of successful translation is required if we are to discover approaches to substantially extend the survival time of cancer patients and hopefully identify cures Cancer Targeted Drug Delivery Elusive Dream describes some answers of achieving the so far elusive dream of treating cancers like other chronic diseases with therapies that focus using improved drug delivery systems designed to better align with the unique biological and physiological properties of cancer

Utilizing Nanomaterials and Nanocarriers Marco Cordani, Maria Condello, Stefania Meschini, Raffaele Strippoli, 2023-06-29 **Cancer Drug Delivery Systems Based on the Tumor Microenvironment** Yasuhiro Matsumura, David Tarin, 2020-01-07 This book proposes the importance of new systems of drug design and delivery based on cancer pathophysiology in addition to cancer molecular and cellular biology The current studies based on molecular and cellular biology while ignoring pathophysiology and pharmacology may be leading the development of antitumor drugs in the wrong direction and wasting a lot of money Although there have been numerous reports of genetic and phenotypic changes in tumors a large body of pathological and clinical evidence supports the conclusion that there are no pivotal changes in tumor cells that distinguish them consistently and reliably from normal dividing cells Unlike using antibiotics against bacterial

infection therefore anticancer agents ACAs need to be delivered selectively to tumor tissues and should be kept there long enough to reproduce the concentrations they reach in the Petri dish which is a closed space where the cytotoxic effects of any anticancer agents ACAs including molecular targeting agents are very strong In the body however administered ACAs are cleared with the passage of time Furthermore most human cancers possess abundant stroma that hinders the penetration of drugs into the tumor microenvironment Therefore to overcome these difficulties novel drug delivery systems have been designed such as nanoparticles and ACA conjugated antibodies to stromal components and to cancer cell surface antigens These advances are described in this book after the first section which describes core features of the pathophysiology of the cancer microenvironment on which these new developments are based Nanoparticle Delivery in Cancer Care Nirav J.
