Dryland Management Economic Case Studies:

Dryland Management: Economic Case Studies John A. Dixon, David E. James, Paul B. Sherman, 2013-11-05 Drylands are a sizeable part of the world's potentially arable land. They vary from the hyper arid regions of the classic deserts of Africa and Asia to the more common semi arid and sub humid areas that support extensive agricultural systems dependent on rainfall or irrigation. Following their successful and innovative work *The Economics of Dryland Management* the editors have assembled twenty case studies from nine countries in the continents of Africa, Asia, North America and Australia. They help to explore more fully the costs of land degradation and illustrate the economics of reclamation, rehabilitation and prevention. The cases in this book present a rich, varied and readable survey of a wide range of drylands and their resources. Originally published in 1990.

Dryland Management John A. Dixon, Paul B. Sherman, David E. James, 1990. Written by the same authors as *The Economics of Dryland Management*, this book outlines an acute global problem and puts forward a new strategy for dealing with it.

Economics of Dryland Management John A. Dixon, David E. James, Paul B. Sherman, 2013-11-05 We have always had land in which the agricultural productivity is limited because there is not enough moisture. Systems of farming and burning often degrade dryland further until it is desert. Today however the problem is becoming much more serious. Over 20 per cent of the world's population lives in dryland areas and unless action is taken drylands will increase dramatically. This book focuses on the people who live and farm in the drylands, their use of land resources and the economic returns from their decisions. In a clear and thorough economic appraisal the authors show how it is still possible to arrest the problem. Originally published in 1989.

Nature, Economy and Society Nilanjan Ghosh, Pranab Mukhopadhyay, Amita Shah, Manoj Panda, 2015-09-01 This book presents an enquiry into the interface between nature, economy and society which is still in its early stages notwithstanding the commendable progress and advances made in the field of environmental and natural resource economics within the ever expanding boundaries of economics as a discipline. It further delineates the evolution of an inter disciplinary framework for analyzing the status, the future goals, mechanisms and policy instruments that can help move towards a more ecologically sustainable, economically beneficial and socially just future. A pre requisite for preparing a comprehensive and coherent framework involves unfolding the multiple layers of interconnectedness between

the three systems nature economy and society each of which has its own internal consistencies as well as externalities Against this backdrop the book presents scholarly contributions that focus on four broadly defined building blocks namely i accounting for ecosystems services for life and human well being ii impacts of economic growth on ecosystems iii social norms equity and governance and iv alternative approaches to green and socio economic systems The analyses presented by some of the most eminent national and international scholars address the major environmental challenges that nations around the world face today and consider which specific policy directions at the international and national level are needed In particular the choices India and South Asia now face as development and environment both need to be addressed adequately touch on many of these challenges

Counting the Costs Jonathan Rigg,1995 Written by an international panel of specialists on Thailand who share a common concern for the environment this volume examines the causes and consequences of environment change both in the countryside and the urban areas of the Kingdom The papers however in no sense reflect a common view the authors embrace contrasting environmental ideologies in discussing a wide range of concerns These include the role of Buddhism and tourism in promoting sustainable development environmental systems of thought and action the practicalities of water pollution control in Bangkok and the Gulf of Thailand and the changing bases of life and livelihood among the hill peoples of the North The environment as an issue of concern is now important phase of assimilation interpretation prescription and action The papers in this volume reflect this change

Elephants, Economics and Ivory Edward B. Barbier,Joanne C. Burgess,Timothy M. Swanson,David W. Pearce,2013-11-05 Ivory is big business and in some parts of Africa elephants have been hunted almost to extinction in the quest for it The losses to African economies have been catastrophic Now there is an international ban on the trade and conservation is the principal goal This should be a matter for rejoicing but nothing is quite so simple The authors of this book have looked at the overall statistics including those for countries where the elephant population is stable They have considered the multiplicity of economic and social functions fulfilled by ensuring that elephant herds survive tourism a variety of ecological purpose and finally as a source of ivory They show how the careful management of elephants as a resource can best serve African interests This book is at the cutting edge of economic thinking and provides a model for the consideration of the difficult relationship between people and wildlife Originally published in 19990

The Economics of Soil Productivity in Sub-Saharan Africa Food and Agriculture Organization of the United Nations,2001-01-01 This study examines the current and potential role of economics in soil productivity in sub Saharan Africa After examining the status of soil productivity and the contribution of conventional economic analyses it considers more innovative approaches that enable economics to play a greater role in the planning and evaluation of soil productivity enhancing measures at farm national and global level In the past economics has tended to focus on one factor at a time but many factors affect soil productivity Decisions policies and their impact call for a more integrative participatory analytical approaches capable of weighing various aspects simultaneously This study highlights how economics can respond to this challenge through the a application of fresh concepts e g natural capital and specific techniques e g multi criteria analysis green accounting

Biodiversity Conservation C. A. Perrings,2012-12-06 This volume is one of a number of publications to carry the results of the first research programme of the Royal Swedish Academy of Science s Beijer Institute The Institute was formed in 1991 in order to promote interdisciplinary research between natural and social scientists on the interdependency between economic and ecological systems In its first research programme the Biodiversity Programme the Institute brought together a number of leading economists and ecologists to address the theoretical and policy issues associated with the current high rates of biodiversity loss in such systems whether the result of direct depletion the destruction of habitat or specialisation in agriculture forestry and fisheries l This volume reports some of the more policy oriented work carried out under the programme The broad aim of the programme is to further our understanding of the causes and consequences of biodiversity loss and to identify the options for addressing the problem The results have turned out to be surprising to those who see biodiversity loss primarily in terms of the erosion of the genetic library In various ways the work carried out under the programme has already begun to alter our perception of where the problem in biodiversity loss lies and what policy options are available to deal with it Indeed the programme has provided a powerful set of arguments for reappraising not just the economic and ecological implications of biodiversity loss but the whole case for development based on specialisation of resource use

Structural Adjustment, the Environment and Sustainable Development David Reed,2013-11-05 This is a pioneering study which should serve as a model for future research and will to a wide audience Dharam Ghai Director United Nations Research Institute for Social Development Structural Adjustment and the Environment Earthscan 1992 was the first book to fully examine the effects of structural adjustment programmes the economic reform policies required by the World Bank and IMF as part of their lending operations with borrowing countries To widespread Critical acclaim it exposed

the damaging environmental and social effects of structural adjustment policies and called for a thorough revision of the then current development policy This new work Structural Adjustment the Environment and sustainable Development is a major step forward in the study of structural adjustment policies It looks in detail at new research and analysis into their effects and incorporates recent studies by a wide range of academics and policy makers leading experts and institutes Focusing on nine in depth case studies the book examines the complex links between macroeconomic policies social impacts and environmental outcomes and takes a forward looking perspective in outlining the alternatives to current structural adjustment policies Review quotes for Structural Adjustment and the Environment Should be essential reading for all students of development Third World Planning Review Breaks new ground in the debate on structural adjustment generally and in the environment development debate International Affairs The most substantial contribution to date to what is undoubtedly an important area Development and Change David Reed is director of the Macroeconomics for Sustainable Development Programme of WWF International and editor of Structural Adjustment and the Environment Earthscan 1992 Originally published in 1996 *Biodiversity Conservation* Charles A. Perrings, Karl-Göran Mäler, Carl Folke, C.S. Holling, Beng-Owe Jansson, 1995-06-30 This book reports the more policy oriented results of the Biodiversity programme of the Royal Swedish Academy of Sciences Beijer Institute The programme brought economists and ecologists together to consider where the problem in biodiversity loss really lies what costs it has for society and how it might best be addressed The results are strikingly different from those reported in other works on the subject Biodiversity loss matters for all ecosystems not just the megadiversity tropical forests And it matters because it compromises the resilience and so the productivity of those systems Biodiversity conservation requires the development of policies that change the behaviour of resource use everywhere not just in parks and reserves The book is required reading for researchers and policy makers alike It canvasses options for the reform of park management biodiversity conservation projects property rights tax trade and price regimes that are within the reach of governments everywhere International Bibliography of the Social Sciences British Library of Political and Economic Science, 1992 The IBSS is the essential tool for librarians university departments research institutions and any public or private institution whose work requires access to up to date and comprehensive knowledge of the social sciences **Trading with the Environment** Thomas Andersson, Carl Folke, Stefan Nystrom, 2013-11-26 Should there be firmer restrictions on trade with more policies aimed at protecting its environmental impacts or would the environment benefit most from unrestricted free trade Do importing countries have a responsibility only to their local ecosystems or are they also responsible for environmental degradation caused by the production of traded goods in exporting countries Trading the Environment examines both the dependence and the effects of international trade on the earth's life support systems and looks at ways in which trading regulations could be adapted to promote ecologically sustainable economic development It addresses the issues from a fully integrated approach focusing on the interrelations

between ecosystems economic development and trade The authors provide a carefully constructed ecological and economic analysis of trade and the environment examine the existing legal and institutional frameworks and set out 16 recommendations to achieve environment beneficial trade at both national and international levels Trading with the environment was originally commissioned by the Swedish government and is already regarded thereon essential reference It makes an excellent introduction as well as constructive analysis both for students and for policy makers and professional economics and other scientists working on the issues Published in 1995

The Revaluation of Women's Work Sheila Lewenhak, 2013-11-05 This book provides a survey and analysis of the different ways in which women's work is valued throughout the world It challenges the narrow definition of work as paid work as that excludes so many of women's activities It looks at ways in which women's worth has been consistently undervalued in industrial as well as non industrial countries in socialist as well as free enterprise economies These practices distort the national product of countries heavily dependent on women's labour but above all they are among the most obvious marks of the exploitation of women Technological changes are already altering established female male divisions of labour Transnational enterprises often located in Special Economic Zones are reducing differences between industrial and nonindustrial countries Valuing women's work correctly whether unpaid in the home or underpaid outside it is part of the battle against discrimination and poverty Men who do similar work also benefit It is the crucial step towards the achievement of male female equality The book will be particularly valuable for those concerned with the issues in trade unions women's groups international agencies and NGOs and for course in economics and social studies
