

- CDCC calculations assuming  ${}^9\text{C}$  to have  ${}^7\text{Be}+2\text{p}$  cluster structure is observed to give similar elastic scattering cross sections as that of a  ${}^8\text{B}+p$  structure.
- However, their breakup cross sections differ quite much at around the Coulomb rainbow angles.
- This suggests that the breakup cross sections, instead of the elastic scattering ones, are more sensitive to the structure of proton-rich nuclei at incident energies around three times of Coulomb barriers.
- The measured 2p values are 2-3 times larger than those of 1p, depending slightly on the target nuclei, markedly suggesting a di-proton configuration for  ${}^9\text{C}$ .  
( ${}^9\text{C} \rightarrow {}^7\text{Be}+2\text{p}$ ).

**Climate Change and Sustainable Agro-ecology in Global Drylands** Adel El-Beltagy, Rattan Lal, Kauser Malik, 2024-10-30 Drylands a home for nearly 2.5 billion people are highly vulnerable to anthropogenic climate change and dryland area may expand to 50% of the Earth s surface by 2100 Climate change may aggravate the prevalence of undernutrition and malnutrition because of adverse effects on quantity and quality of food production in these regions This book takes a holistic approach to sustainable management of drylands to make agriculture drought resilient Eminent scientists from around the world share their knowledge and experiences for adaptation and mitigation of the anthropogenic climate change through innovation in sustainable management of water soil crops livestock and fisheries They anticipate that

climate change will have major impacts on agro ecosystems which requires continuous dynamic assessments globally regionally and at the local level where the major action of adaptation would have to occur The assessment will require international cooperation and national capacity building This book emphasizes approaches such as smart and precision agriculture conservation agriculture and new innovation and technology as tools for adaptation and mitigation Several chapters are devoted to the human dimensions and policy considerations with emphasis on enhancing coping and adaptive capacity This book addresses the picture after COP27 including loss and damage governance and finance This work will be valuable to students and researchers in agroecology climate change science and dryland agriculture

**Interactions In The Rhizosphere** Soumitra Paul Chowdhury, Adam Schikora, László Kredics, Fred O. Asiegbu, Beatriz Lagunas, 2023-09-05 The rhizosphere is an ecological hotspot Plant roots bacteria archaea fungi nematodes and other macroscopic organisms interact here with each other Plants represent the main influencing force as they produce a mixture of chemical molecules and extrude them in the form of root exudates Those exudates determine not only the nutrient availability of the plant but also influence the outcome of the interactions in the vicinity of the roots In response to the plant derived signals a subset of the bulk soil microbes can proliferate in the proximity of the root and some of them can eventually overcome the plant defense system to colonize the plants The root associated microbiota is assumed to be crucial for plant health and belowground plant microbe and microbe microbe interactions can result in altered growth and nutritional quality of the aboveground plant parts Such interactions affect community composition and productivity in natural ecosystems or crop yield in agricultural fields Root associations with plant growth promoting rhizobacteria PGPR producing phytohormones that alter root architecture or produce antibiotics to suppress antagonistic pathogens affecting nutrient availability and competition between plants are just a few among many examples of such belowground interactions in the rhizosphere Moreover the role of rhizosphere microorganisms in stimulating the plant immune system leading to Induced Systemic Resistance ISR has also been a focus of an active investigation However the molecular mechanisms are still largely unknown On one hand it has been proposed that plants actively recruit beneficial microorganisms under certain pathological

conditions or influence the soil microbial communities and create a so called soil memory which is conveyed to future plant generations On the other the presence and interactions between microorganisms in the soil have a substantial impact on plant health     Exploring Planetary Climate Ralph Lorenz,2019-01-03 An accessible and engaging account of the history of
