America's love affair with the automobile

Drivers may feel spooked by seeing the first self-driving cars appear in coming years. But the new era could prove far less disruptive and bloody than the automobile's 20th-century battle to push pedestrians off U.S. streets.

The change in American public opinion from thinking of cars as wildly dangerous vehicles to having a "love affair with the automobile" was no accident. Instead, it reflected a serious push by the car industry to change people's psychology. Automobiles had to win the battle for hearts and minds before they could take over streets where people had once swarmed.

"That's not the natural order of things; that's the result of a real struggle," said Peter Norton, a historian of technology at the University of Virginia. "That struggle may have analogies with what we're facing in the future with autonomous vehicles."

One key difference between the two eras of transition may prove to be a huge blessing – the rise of self-driving cars could boost road safety and eliminate thousands of unnecessary motorist deaths in the U.S. each year. That futuristic scenario stands in contrast to the relatively bloody rise of cars in the early 20th century.

A bloody beginning

American hearts and minds did not change easily when cars first appeared. Pedestrians crowded the streets of U.S. cities and towns at the start of the 20th century, walking alongside horse-drawn wagons, carriages and trolleys. Contrary to modern sensibilities, parents thought it was perfectly normal for their kids to play in the streets.

"If a pedestrian strode into a street and maybe a wagon wheel ran over their foot, the law would be on their side," Norton told InnovationNewsDaily. "Judges would say pedestrians belonged there, and that if you're operating a heavy dangerous vehicle, it's your fault."

Car accidents led to injuries and deaths among pedestrians and a strong public backlash against automobiles, Norton said. He found newspapers of the time commonly ran cartoons showing the grim reaper at the wheel of a car running over children – part of his research for the book "Fighting Traffic: The Dawn of the Motor Age in the American City".

People even pushed for a 1923 law requiring all cars in Cincinnati to have a mechanism limiting their speed to no higher than 25 mph, but car makers gathered enough support to defeat it.

America's affair with the automobile

The automobile industry eventually began waging a psychological campaign to get pedestrians out of the streets. First, it invented the term "jaywalking" (a reference to the idea of jaybirds as loud idiots) to make fun of pedestrians walking in the street as being stuck in the past.

Second, schools helped train new generations of children to avoid the streets when the American Automobile Association (AAA) became the top supplier of safety curriculum for U.S. schools in the 1920s, Norton explained. The AAA also spread the idea of school safety patrols to help keep kids out of the street.

- 0 In the near future motorists may feel frightened by
- A conflicts with walkers.
 - B more car crashes.
 - C autonomous vehicles.
 - D a higher traffic volume.

The Oxford Handbook of Mobile Music Studies, Volume 2 Sumanth Gopinath, Jason Stanyek, 2014-03. The two volumes of *The Oxford Handbook of Mobile Music Studies* consolidate an area of scholarly inquiry that addresses how mechanical, electrical, and digital technologies and their corresponding economies of scale have rendered music and sound increasingly mobile, portable, fungible, and ubiquitous. At once a marketing term, a common mode of everyday life, performance, and an instigator of experimental aesthetics, mobile music opens up a space for studying the momentous transformations in the production, distribution, consumption, and experience of music and sound that took place between the late nineteenth and the early twenty-first centuries. Taken together, the two volumes cover a large swath of the world: the US, the UK, Japan, Brazil, Germany, Turkey, Mexico, France, China, Jamaica, Iraq, the Philippines, India, Sweden, and a similarly broad array of the musical and nonmusical sounds suffusing the soundscapes of mobility. Volume 2 investigates the ramifications of mobile music technologies on musical, sonic performance, and aesthetics. Two core arguments are that mobility is not the same thing as actual movement and that artistic production cannot be absolutely sundered from the performances of quotidian life. The volume's chapters investigate the mobilization of frequency range by sirens and miniature speakers, sound vehicles such as boom cars, ice cream trucks, and trains; the gestural choreographies of soundwalk pieces and mundane interactions with digital media; dance music practices in laptop and iPod DJing; the imagery of iPod commercials; production practices in Turkish political music and black popular music; the aesthetics of handheld video games and chiptune music; and the mobile device as a new musical instrument and resource for musical ensembles.

The Big Book of Car Culture Jim Hinckley, Jon G. Robinson, 2005. With the powerful rhythmic sounds of Aboriginal English and Kokatha language woven through the narrative, *Mazin Grace* is the inspirational story of a feisty girl who refuses to be told who she is, determined to uncover the truth for herself. Growing up on the Mission isn't easy for clever Grace Oldman. When her classmates tease her for not having a father, she doesn't know what to say. Pappa Neddy says her dad is the Lord God in Heaven, but that doesn't help when the Mission kids call her a bastard. As Grace slowly pieces together clues that might lead to answers, she struggles to find a place in a community that rejects her for reasons she doesn't understand. In this novel, author Dylan Coleman fictionalizes her mother's childhood at the Koonibba Lutheran Mission in South Australia in the 1940s and 1950s.
