Rethinking Development in South Asia Farid Uddin Ahamed, M. Saiful Islam, Amir Mohammad Nasrullah, 2022-03-17 This book challenges the way development has been conceptualized and practiced in South Asian context and argues for its deconstruction in a way that would allow freedom choice and greater well being for the local people Far from taking development for granted as growth and advancement this book unveils how development could also be a destructive force to local socio cultural and environmental contexts With a critical examination of such conventional development practices as hegemonic patriarchal devastating and

failure it highlights how the rethinking of development could be seen as a matter of practice by incorporating people's interest priorities and participation. The book theoretically challenges the conventional notion of hegemonic development and proposes alternative means and practically provides nuances of ethnographic knowledge which will be of great interest to policy planners, development practitioners, educationists and anyone interested in knowing more about how people think about their own development.

The Atlas of African Affairs Ieuan L.I. Griffiths, 2013-06-17. The Atlas of African Affairs is divided into five sections dealing with environmental, historical, political and economic issues and with Southern Africa. Throughout the book presents an interdisciplinary integrated perspective on African affairs. Most of the chapters deal with continent-wide themes and are illustrated by maps of Africa as a whole drawn to a standardised outline of the same map projection and scale. Other chapters often by way of example discuss parts of the continent or individual countries and are illustrated with appropriate maps. The basic format of integrated text and maps is supplemented by guides to further reading at the end of each section as well as a series of detailed statistical tables at the end of the book.

Land Change Science in the Tropics: Changing Agricultural Landscapes Andrew Millington, Wendy Jepson, 2008-08-15. Land use and land cover change research over the past decade has focused mainly on contemporary primary land cover conversions in the tropics and sub-tropics with considerable resources dedicated to the explanation and prediction of tropical deforestation and often ignoring the dynamism in the world's agro-pastoral landscapes. This collection integrates cutting-edge research in the social, biogeophysical and geographical information sciences to understand the human and environmental dynamics that change the type, magnitude and location of land uses and land covers in the changing countryside. Our contributors are from across the globe and draw on diverse empirical pan-tropical case studies and disciplinary influences. The research reported examines land use and land cover change in Bolivia, Brazil, China, Colombia, Côte d'Ivoire, India, Malawi, Mexico, Pakistan, Peru, Senegal and Thailand. Each chapter in this book advances one of three themes: i) adaptations and change in settled agricultural zones; ii) agricultural intensification; and iii) markets and institutions. This book describes the monitoring of land cover changes, explains the processes through which land is altered and describes the development of spatially explicit models to predict land change. This book illustrates how practitioners have integrated knowledge from the three scientific realms: social, biophysical and GIScience that underpin land change science.

Forum for Applied Research and Public Policy, 1996. Natural Disasters and Development in a Globalizing World Mark Pelling, 2003. Authoritative and comprehensive, this book makes clear that there are links between global-scale processes and local experiences of disaster but underlies the difficulty of attributing blame for individual disasters on specific global pressures.

Late Victorian Holocausts Mike Davis, 2002-06-17. This global environmental and political history will redefine the way we think about the European colonial project. Observer sets the triumph of the late 19th-century Western imperialism in the context of catastrophic El Niño weather patterns at that time, groundbreaking mind-stretching. *The Independent* Examining a series of El Niño-induced droughts and the famines that they

spawned around the globe in the last third of the 19th century Mike Davis discloses the intimate baleful relationship between imperial arrogance and natural incident that combined to produce some of the worst tragedies in human history Late Victorian Holocausts focuses on three zones of drought and subsequent famine India Northern China and Northeastern Brazil All were affected by the same global climatic factors that caused massive crop failures and all experienced brutal famines that decimated local populations But the effects of drought were magnified in each case because of singularly destructive policies promulgated by different ruling elites Davis argues that the seeds of underdevelopment in what later became known as the Third World were sown in this era of High Imperialism as the price for capitalist modernization was paid in the currency of millions of peasants lives

Maize and Grace James C. McCann, 2007-09-15 Sometime around 1500 AD an African farmer planted a maize seed imported from the New World That act set in motion the remarkable saga of one of the world's most influential crops one that would transform the future of Africa and of the Atlantic world Africa's experience with maize is distinctive but also instructive from a global perspective experts predict that by 2020 maize will become the world's most cultivated crop James C McCann moves easily from the village level to the continental scale from the medieval to the modern as he explains the science of maize production and explores how the crop has imprinted itself on Africa's agrarian and urban landscapes Today maize accounts for more than half the calories people consume in many African countries During the twentieth century a tidal wave of maize engulfed the continent and supplanted Africa's own historical grain crops sorghum millet and rice In the metamorphosis of maize from an exotic visitor into a quintessentially African crop in its transformation from vegetable to grain and from curiosity to staple lies a revealing story of cultural adaptation As it unfolds we see how this sixteenth century stranger has become indispensable to Africa's fields storehouses and diets and has embedded itself in Africa's political economic and social relations The recent spread of maize has been alarmingly fast with implications largely overlooked by the media and policymakers McCann's compelling history offers insight into the profound influence of a single crop on African culture health technological innovation and the future of the world's food supply

Building Resilience to Climate Shocks in Ethiopia Claudia Ringler, 2019-05-30 Ethiopia has made consistent progress in improving development indicators but vulnerability to extreme weather events is a continuing concern especially for people reliant on agriculture for their livelihoods The 2015/16 El Niño event caused both a severe drought and flooding which highlighted the remarkable improvements in the country's resilience and the remaining challenges in ensuring that everyone bounces back relatively quickly from adverse climatic shocks Given the links between climate change cyclical droughts and poverty and the high cost of emergency humanitarian assistance the Government of Ethiopia and development partners decided to review the country's resilience programming and identify opportunities and challenges to building greater resilience into the agricultural system This work included three components a review of the literature and government programs on resilience in Ethiopia key informant interviews in several regions of the country and quantitative crop modeling

and economywide analyses to inform resilience programming Unruly Complexity Peter J. Taylor, 2005-09-15 Unruly Complexity makes a strong case that if research is to be successfully implemented in the public discourse researchers and the public alike must consider the larger web of interactions that influences how scientific knowledge is created and used
