Drug Treatment Of Epilepsy Monographs In Controlled Medicine:

Medical Monograph, 1976 **Drugs for the Control of Epilepsy** Carl L. Faingold, Gerhard H. Fromm, 2019-06-04

Originally published in 1991 This book brings together the ideas of an international group of experts on clinical and experimental epilepsy These authors consider how antiepileptic drugs may act on elements of neuronal networks to reduce seizure incidence and severity The book addresses such topics as the four general classes of anticonvulsant drug mechanisms major epilepsy models the proposed mechanisms of action of major antiepileptic drugs and the clinical use of antiepileptic drugs in the treatment of various forms of human epilepsy This volume is special for its focus on the neuronal network approach to epilepsy as well as for its comprehensive review and integration of human and animal data Neurologists pharmacologists psychiatrists and other investigators actively working on epilepsy research will find this book to be a useful thought provoking reference volume

Principles of Animal Extrapolation (1991) Edward J. Calabrese, 2017-11-22

Principles of Animal Extrapolation addresses the conceptual basis for animal extrapolation and provides an abundance of documentation that illustrates how these principles may be applied in the selection of the more appropriate models and in the interpretation of toxicological studies The book analyzes and documents each specific biological cause of interspecies differences in susceptibility to toxic agents including differences in absorption gut flora tissue distribution metabolism mechanisms and efficiencies of repair and excretion The problem of the heterogeneity of the human population is addressed through several chapters that assess the availability and prospects of developing predictive animal models for normal humans as well as selected potential high risk groups Other topics presented in this book include the biological basis of regulatory actions involving attempts to extrapolate from exceptionally high exposure levels to realistic values especially carcinogens an assessment of genotoxicity tests their ability to predict carcinogenicity in whole animals and the manner in which they should be used by regulatory agencies birth defects and predicting the risk of human teratogenesis Principle of Animal Extrapolation is essential for environmental toxicologists It also provides valuable information to biomedical scientists especially those involved in drug development and testing and regulatory personnel in agencies such as the EPA the OSHA the NIOSH and the FDA
