Brown, 2012-12-06 Since the discovery of the pancreatic secretagogue secretin by W M BAYLISS and E H STARLING at the inception of the twentieth century intense interest has focused on numerous continually expanding classes of small peptides which appear to serve as regulatory molecules in the gastrointestinal tract brain and other organ systems Initially many of these substances were like secretin discovered in functional assays as factors or activities extractable in minute quantities from tissues or tissue fluids By the middle of the century advances in biochemical and immunological methods for the purification characterization and quantification of biologically active peptides in organ systems tissues and body fluids provided further impetus to this field It was readily appreciated that small biologically active peptides were particularly abundant in the digestive tract Many peptides such as vasoactive intestinal peptide gastrin and more recently peptide YY and galanin were in fact originally discovered in and isolated from gut tissue Moreover these peptides were found to have profound actions on the gastroenteropancreatic system in vivo and in vitro During the past 2 decades information on regulatory peptides has burgeoned as a result of technological refinements in the synthesis of peptides improved methods for detecting and visualizing peptides and their precursors in cells and tissues from a variety of species advances in the functional assessment of peptide activity and the application of molecular biological techniques to the characterization of peptide gene structure and expression

New Directions in Affective Disorders Bernard Lerer, Samuel Gershon, 2012-12-06 This book is presented as a 1989 update on the task set by Robert Burton in his Anatomy of Melancholy published in 1621 Burton's treatise addressed questions regarding depression which are still highly relevant today What is it with all the kinds causes symptoms prognosticks and several cures of it These remain the core issues in affective disorders notwithstanding the remarkable progress that has been made in addressing them New Directions in Affective Disorders sets out to provide an overview of what has been achieved with particular emphasis on developing trends and novel initiatives in both fundamental research and treatment The overriding objective of the book is to integrate significant contributions from basic and clinical science into a comprehensive format which will be of value to both clinicians and researchers Intensive interest in affective illness is an inevitable consequence of the frequency with which these disorders

occur Depression is the most common psychiatric condition affecting as many as 50% of people in Western countries at some time in their lives National Institute of Mental Health Statistics estimate that 15% of adults between 18 and 74 years of age may be suffering from serious depressive disorders in any given year Depression is a serious condition with a high mortality A suicide rate of approximately 20 000 deaths per year as a result of this illness is almost certainly a conservative estimate
