Torchilin,2013-03-09 Drugs usually have no natural affinity for the cells tissues and organs where therapeutic effects are needed which frequently results in low efficiency and unwanted side effects This concern is even more profound when using highly potent and cytotoxic anticancer drugs or specific agents such as enzymes and genetic materials since their effective and safe action requires precise cellular or even sub cellular addressing in the target organ To meet safety efficiency and specificity requirements drugs somehow must be targeted to the sites of their expected therapeutic action The idea of the magic bullet or drug targeting proposed by Erlich a century ago generates great and continuously growing interest in biomedical industrial and financial circles This book is focused on the strategies designed to target therapeutic or diagnostic agents to the disease sites In an attempt to include in this volume the set of chapters reflecting both traditional and emerging areas of drug targeting we have contacted many leading scientists in the field asking for their contributions Their responses were most favorable and encouraging As a result we have succeeded in assembling a series of outstanding contributions reflecting practically all the key areas of drug targeting The final structure of this book is as follows *Drugs and the Future* David J. Nutt,Trevor W. Robbins,Gerald V. Stimson,Martin Ince,Andrew Jackson,2006-12-11 Drugs and the Future presents 13 reviews collected to present the new advances in all areas of addiction research including knowledge gained from mapping the human genome the improved understanding of brain pathways and functions that are stimulated by addictive drugs experimental and clinical psychology approaches to addiction and treatment as well as both ethical

considerations and social policy The book also includes chapters on the history of addictive substances and some personal narratives of addiction Introduced by Sir David King Science Advisory to the UK Government and head of the Office of Science and Technology and Nora Volkow director of the National Institute on Drug Abuse in the USA the book uniquely covers the full range of disciplines which can provide insight into the future of addiction from genetics to the humanities Written for a scientific audience it is also applicable to non specialists as well Provides an unique overview of what we know about addiction and how scientific knowledge can and should be applied in the societal ethical and political context Applies the state of the art research in fields such as Genomics Neuroscience Pharmacology Social Policy and Ethics to addiction research Includes a preface by Sir David King Science Advisory to the UK Government and head of the Office of Science and Technology and in introduction by Nora Volkow director of the National Institute on Drug Abuse in the USA
