Social Decision-Making in Animals Rui F. Oliveira,James P. Curley,Elouise Leadbeater,2020-08-10 **Animal Life at Low Temperature** John Davenport,2012-12-06 To humans cold has a distinctly positive quality Frostbite a nip in the air biting cold all express the concept of cold as an entity which attacks the body numbing and damaging it in the process Probably the richness of descriptive English in this area stems from the early experiences of a group of essentially tropical

apes making their living on a cold and windswept island group half way between the Equator and the Arctic During a scientific education we soon learn that there is no such thing as cold only an absence of heat Cold does not invade us heat simply deserts Later still we come to appreciate that temperature is a reflection of kinetic energy and that the quantity of kinetic energy in a system is determined by the speed of molecular movement Despite this realization it is difficult to abandon the sensible prejudices of palaeolithic Homo sapiens shivering in his huts and caves For example appreciating that a polar bear is probably as comfortable when swimming from ice floe to ice floe as we are when swimming in the summer Mediterranean is not easy understanding the thermal sensations of a cold blooded earthworm virtually impossible We must always be wary of an anthropocentric attitude when considering the effects of cold on other species
