

Scientific Enquiry

How do scientists solve problems or find answers to questions?
They carry out a scientific enquiry.

Scientists use different enquiry types to answer different questions. They might even use two or more types of enquiry at the same time. For example, a comparative test may also involve observing over time.

The types of scientific enquiry are:

- Observing over Time
- Pattern Seeking
- Identifying, Grouping and Classifying
- Comparative Testing
- Experimenting

Each enquiry type has its own bias. These will be used throughout the PowerPoint.

Enquiry Type	What is the basic need of a fish?	What are the basic needs of a fish?
Observing over Time	What are the basic needs of a fish?	What are the basic needs of a fish?
Pattern Seeking	What are the basic needs of a fish?	What are the basic needs of a fish?
Identifying, Grouping and Classifying	What are the basic needs of a fish?	What are the basic needs of a fish?
Comparative Testing	What are the basic needs of a fish?	What are the basic needs of a fish?

Animals And More Animals Stepping Into Science:

Contagion Narratives R. Sreejith Varma, Ajanta Sircar, 2022-12-30 This volume is a collection of ten essays that direct their gaze to the unfolding of contagions in the non classical contexts of Asia and Africa Or to borrow from the title of one of Partha Chatterjee's books they are reflections on the pandemic in most of the world Featuring many scholars of the humanities and social sciences in the Global South these chapters take as their intellectual focus the political social as well as the ethical challenges posed by the contagions in the East Through analyses of literary narratives films video games this Contagion Narratives traces the manufactured narratives of victimization by majority communities and the lethal divides consequently being drawn between a reconstituted authentic majority and the more vulnerable minority other in these societies The essays in this collection are animated by imaginations of liveable alternatives on a planet on the brink This volume traces lineages to Buchi Emecheta and Rabindranath Tagore rather than Albert Camus to Satyajit Ray and the indie traditions rather than Hollywood and to Buddhism rather than Christianity to track the historic journeys of modernity Using an eclectic set of analytical tools and strategies of textual criticism this volume argues that ideas of democracy even while they carry echoes of other societies are markedly different as they travel from Gaddafi's Libya to Wuhan under lockdown to colonial Bengal *Catalog of Copyright Entries. Experimentation Donna Yarri, 2005-08-18 The ethical treatment of animals has become an issue of serious moral concern Many people are challenging long held assumptions about animals and raising questions about their status and treatment What is the relationship between humans and animals Do animals have moral standing Do we have direct or indirect duties to animals Does human benefit always outweigh animal suffering The use of animals for experimentation raises all of these questions in a particularly insistent way Donna Yarri gives an overview of the current state of the discussion and presents an argument for significantly restricted animal experimentation Pointing to the similarities between humans and animals she argues that the actual differences are differences of degree rather than kind Animal cognition and animal sentience together are the basis for the claim that experimental animals do have rights Examining arguments in the disciplines of ethology philosophy science and theology Yarri makes a case for placing substantial restrictions on animal experimentation Grounding her examination in Christian theology she formulates a more humane approach to animal experimentation She concludes with a concrete burden benefit analysis that can serve as the foundation for informed decision making *The Ethics of Animal Experimentation* serves as both a handbook of animal rights theory and a practical guide to navigating the complexities of animal experimentation As animal experimentation features in an increasing number of scientific endeavors it is an ethical issue that requires our immediate attention Yarri's unique contribution forges a path toward an ethical practice of animal

An Introduction to Science Studies John M. Ziman,1987-07-23 The purpose of this book is to give a coherent account of the different perspectives on science and technology that are normally studied under various disciplinary heads such as

philosophy of science sociology of science and science policy It is intended for students embarking on courses in these subjects and assumes no special knowledge of any science It is written in a direct and simple style and technical language is introduced very sparingly As various perspectives are sketched out in this book the reader moves towards a consistent conception of contemporary science as a rapidly changing social institution that has already grown out of its traditional forms and plays a central role in society at large It will appeal to students in a wide range of scientific disciplines and complement well Professor Ziman's earlier books
