Misra, 2017-09-07 This comprehensive book presents a modern concept in biophysics based on recently published research. It highlights various aspects of the biophysical fundamentals and techniques that are currently used to study different physical properties of biomolecules and relates the biological phenomenon with the underlying physical concepts. The content is divided into nine chapters summarizing the structural details of proteins including recently discovered novel folds, higher order structures of nucleic acids as well as lipids and the physical forces governing the macromolecular interactions which are essential for the various biological processes. It also provides insights into the recent advances in biophysical techniques including Hydrogen Deuterium Exchange with Mass Spectrometry, HDX-MS, Small angle X-ray scattering, SAXS, and Cryo Electron Microscopy, cryo-EM, supplemented with interesting experimental data. It is a valuable reference resource for anyone with a desire to gain a better understanding of the fundamentals of biophysical concepts and techniques of important biomolecules.      **Structural Molecular Biology** David Davies, 2012-06-28 Structural biology is undergoing a revolution in both the sophistication of new biophysical methods and the complexity of problems in biomolecular structure and organization opened up for study. These changes are directly attributable to major advances in computer technology, computational methods, development of high intensity synchrotron radiation sources, new magnetic resonance methods, laser optical techniques, etc. Structure function problems previously considered intractable may now be solved. As this area of specialisation continues to expand, there is a need to review the various physical methods currently being used and developed in structural molecular biology. At the same time that individual techniques and their applications become more specialized

the need for effective communication between investigators gains in imperative. It is vital to forge links among sub disciplines and to emphasise the complementary nature of results observed by different biophysical methods. This publication contains the review lectures given at a meeting on Current Methods in Structural Molecular Biology sponsored by NATO as an Advanced Study Institute and by FEBS's Advanced Course No 78. The aim of the meeting was to bring together in a teaching environment students and specialists in diverse biophysical methodologies with the specific purpose of exploring questioning and critically assessing the present and future state of biological structure research. The scientific content of the interdisciplinary Study Institute centred around three interrelated aspects: biophysical methods and instrumentation; their application to biological structure problems; and derivation of structural information and insights.
