Annual Review of Anthropology William H. Durham,1999-10

DNA Engineered Noble Metal Nanoparticles Ignác Capek,2015-04-13 There is a growing interest in the use of nanoparticles modified with DNAs viruses peptides and proteins for the rational design of nanostructured functional materials and their use in biosensor applications The challenge is to control the organization of biomolecules on nanoparticles while retaining their biological activity as potential chemical and gene therapeutics These noble metal nanoparticles biomolecules conjugates have specific properties and therefore they are attractive materials for nanotechnology in biochemistry and medicine In this book the author review work performed dealing with the DNA structure and functionalities interactions between DNA noble metal nanoparticles surface active agents solvents and other additives Particular attention is given to how the DNA s chain length and the DNA conformation affect the interaction and structure of the nanoconjugates and nanostructures that are formed Also discussed are the recent advances in the preparation characterization and applications of noble metal nanoparticles that are conjugated with DNA aptamers and oligomers The advantages and disadvantages of functionalized nanoparticles through various detection modes are highlighted including colorimetry fluorescence electrochemistry SPR and mass spectrometry for the detection of small molecules and biomolecules The functionalized noble metal nanoparticles are selective and sensitive for the analytes showing their great potential in biosensing Furthermore this book reviews recent progress in the area of DNA noble metal nanoparticles based artificial nanostructures that is the preparation collective properties and applications of various DNA based nanostructures are also described

Life's Solution Simon Conway Morris,2003-09-04 The assassin s bullet misses the Archduke s carriage moves forward and a catastrophic war is avoided So too with the history of life Re run the tape of life as Stephen J Gould claimed and the outcome must be entirely different an alien world without humans and maybe not even intelligence The history of life is littered with accidents any twist or turn may lead to a completely different world Now this view is being challenged Simon Conway Morris explores the evidence demonstrating life s almost eerie ability to navigate to a single solution repeatedly Eyes brains tools even culture all are very much on the cards So if these are all evolutionary inevitabilities where are our counterparts across the galaxy The tape of life can only run on a suitable planet and it seems

that such Earth like planets may be much rarer than hoped Inevitable humans yes but in a lonely Universe

as well as what we know about the molecular mechanisms which constitute the fundamentals of the resistance and adaptation of extremophiles to extreme conditions The theme Extremophiles is headed by two chapters introducing the subject for non specialists in the field one covering the basic concepts and the other one giving an overview of the biotopes These three volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Evolution and the Social Mind Joseph P. Forgas, Martie G. Haselton, William von Hippel, 2011-03-15 This book seeks to combine the study of human social cognition the way we think decide plan and analyze social situations with an evolutionary framework that considers these activities in light of evolutionary adaptations for solving problems of survival faced by our ancestors over thousands of generations The chapters report recent research and theories illustrating how evolutionary principles can shed new light on the subtle and often subconscious ways that cognitive mechanisms guide peoples thoughts memories judgments attitudes and behaviors in social life The contributors to this volume who are leading researchers in their fields seek answers to such intriguing questions as how can evolutionary principles help to explain human beliefs attitudes judgments prejudice and group preferences Are there benefits to behaving unpredictably Why are prototypical faces more attractive than atypical ones How do men and women think about and select potential mates What are the adaptive functions of negative affect What are the evolutionary influences on the way people think about and respond to social exclusion and ostracism Evolution and the Social Mind offers a highly integrated and representative coverage of this emerging field and is suitable as a textbook in advanced courses dealing with social cognition and evolutionary psychology
